Tractor Supply Company is committed to providing transparent disclosures relative to our climate footprint, carbon-reduction goals, progress toward achieving those goals, and other relevant climate-related information. The following disclosures are made to comply with the California Voluntary Carbon Market Disclosure Act:

- Scope 1 and 2 greenhouse gas (GHG) emissions are calculated using guidance found in the Greenhouse Gas Protocol: A Corporate Accounting and Reporting Standard. Tractor Supply Company uses expert advisors to prepare our inventory and advise us on best practices for improving our data management, calculation methodologies, and reporting systems.

- We have not third-party verified our GHG inventory at this time.

- In 2021, Tractor Supply Company set a goal to reduce Scope 1 and Scope 2 GHG emissions to net zero by 2040, with interim reduction goals of 20% by 2025 and 50% by 2030. Tractor Supply Company has not made claims regarding the achievement of net zero emissions within our operations but rather expressed our long-term desire to reduce its carbon footprint as noted in our Stewardship Report. In late 2023, we submitted our letter of commitment to the Science Based Targets initiative, outlining our intention to set a science-based target. This new target will replace existing emissions targets, cover all three scopes.

- As noted in our 2022 Stewardship Tearsheet, we have reduced our Scope 2 (market-based) emissions by 12% from a baseline of 2020 through capital investment in energy savings projects and purchase of renewable energy credits that are eGreen Certified. More information on these investments can be found in our CDP report, C4.3b.

- Tractor Supply Company does not currently market, purchase, sell, or use voluntary carbon offsets in our decarbonization strategy.

This statement will be updated as required under the California Voluntary Carbon Market Disclosures Act (AB 1305) on an annual basis.
