Proper Hose Set Up

- To ensure maximum flexibility, set up should be performed in temperatures above 70 degrees.
- Remove all packaging and ties.
- Check that the washer is properly seated in the coupling that attaches to the home/spigot.
- Unwind the hose loosely in a circular motion before attaching to the spigot or faucet.
- Run water through the hose.
- Leave the hose laid out straight and allow it to heat up during the day.
- Wind hose accordingly.
