

The Wintergreen Boxwood is a slow growing shrub that is cold hardy and versatile. Perfect for landscapes or a decorative pot on a patio. This shrub features oval shaped leaves that have two toned shading with both bright green and dark green colors. Gaining 2-3 inches of growth a year, the Wintergreen Boxwood is commonly shaped into spheres, circles or cubes. When placing in rows, this shrub makes the perfect low growing hedge. Mature height of a Wintergreen Boxwood will be approximately 3 feet with a mature spread of 4-5 feet. This shrub will be a perfect addition to your landscaping.

- Includes one Wintergreen Boxwood in a #3 (2.929 gal.) pot and detailed planting instructions.
- Extremely adaptable shrub that is slow growing.
- Perfect for landscapes or can be placed in pots on your patio.
- Best grown in USDA Hardiness Zones 5-8.
- Plant in full to partial sun. Apply slow release fertilizer in the spring before new growth emerges.
- Water once or twice weekly while establishing, after that water weekly during periods of drought or heat.
- Mature height will be 3 feet, and mature spread will be 4-5 feet.
- #3 size pot is equal to 2.929 gallons/11.090 Liters

Below are general planting instructions.

1. Remove tree and soil mix from plastic container.
2. Dig hole twice the width of pot and as deep.
3. Place roots, surrounded by potting soil from container, in the middle of hole. The top of potting soil should be slightly above ground level, as the plant will later settle. Be careful to not plant too deep as this will suffocate the root system.
4. Ensure the roots are not tightly compressed. Use your fingers or blunt instrument to loosen the potting soil/roots and spread gently to encourage outward growth into the surrounding earth.
5. Use soil that was removed while digging to fill hole back, but remember to only fill to top level of soil mix that is around plant.
6. Water soil, allow it to settle and add more soil if needed. Tamp lightly. (Tamp, for the majority of us who might not know, means to tap the soil with light to medium blows repeatedly.) This will help soil to settle.
7. Water plant again. Adding mulch around plant in a 1-2" layer will help retain moisture. If experiencing hot or dry weather it will be important to water plants more frequently, versus the recommended 1-2 times a week to water thoroughly.

Please review the recommended USDA Zones for your area. It is important to select plants with recommendations for your zone; otherwise, they will not be successful in your landscape due to their inability to grow in those weather conditions.
