

50:1 **MIX**

**ENGINEERED
FUEL + OIL**

**READY TO USE
FOR 2-CYCLE ENGINES**

ETHANOL-FREE

EXCELLENT FOR LONG TERM STORAGE

DANGER:

EXTREMELY FLAMMABLE LIQUID & VAPOR. VAPOR MAY CAUSE FLASH FIRE.
VAPOR HARMFUL. HARMFUL OR FATAL IF SWALLOWED. IRRITATING TO
RESPIRATORY TRACT, EYES & SKIN.
CAREFULLY READ ALL WARNINGS ON BACK PANEL.

110 FL. OZ. (3.253 Liters)

TRUFUEL[®]

THE ORIGINAL ENGINEERED FUEL FOR OUTDOOR POWER EQUIPMENT

TRUFUEL®

POOR PERFORMING EQUIPMENT IS TYPICALLY THE RESULT OF ETHANOL AND OTHER CONTRIBUTING FACTORS FOUND IN PUMP GAS FROM THE STATION.

Whether you are running 2-cycle or 4-cycle outdoor power equipment, the key to optimal performance and protection is fuel specifically designed for small engines. TruFuel's ethanol-free, 92+ octane formula is the pioneer in engineered fuel, combatting the issues associated with pump gas that lead to poor performance, costly repairs and downtime.

WHY IS "ETHANOL-FREE" SO IMPORTANT FOR SMALL ENGINE USE?

PHASE SEPARATION

Phase separation is a common occurrence that results from the ethanol in pump gas drawing in moisture from the atmosphere. The water then bonds with the ethanol, separates and collects at the bottom of the tank. In addition to causing rust and corrosion, the raw ethanol and water are the first to enter your engine. This results in poor starts and high potential for internal damage, particularly in 2-cycle engines that no longer have the lubrication necessary to operate as the mix of fuel and oil has been disrupted and fuel treatment cannot bring it back to proper blend levels. Most do not realize that **pump gas with ethanol destabilizes and becomes highly ineffective in as little as 30 days**, so that red-can fill up at the gas station can be a recipe for disaster, particularly for limited use equipment.

REGULAR FUEL LINE

**FUEL LINE EXPOSED
TO ETHANOL**

In addition to drying out and cracking rubber and plastic engine parts, **ethanol is the culprit** in a process that worsens over time and can destroy your equipment.

*SO THAT RED-CAN FILL UP
AT THE GAS STATION CAN
BE A RECIPE FOR DISASTER*

1 GASOLINE & 2-CYCLE OIL

2 PHASE SEPARATION!

3 ETHANOL, WATER & NO OIL

The first thing pumped into your engine.

TRUFUEL®

////////// ENGINEERED FOR OUTDOOR POWER EQUIPMENT

TruFuel has a shelf life of more than 5 years unopened and greater than 2 years after opening. It does not contain the components that break down fuel like station gas. TruFuel 40:1 and 50:1 mixes contain the exact blends of fuel & high quality synthetic oil recommended by equipment manufacturers, while TruFuel 4-cycle fuel contains our unique TF3 additive package that helps mowers, generators, power washers and snow throwers perform at their best, even despite limited use. TruFuel's ethanol-free, gum & varnish-free, benzene-free formula with balanced aromatics and proprietary stabilizer result in easy engine starts, smoother idling and stronger throttle response year after year.
