

5 or 6 Buckets Per Site* For The Entire Year

Coincide Lucky Buck Mineral Usage with the Antler Growth Cycle to get Great Results!

Give them all they want, the deer will regulate themselves to what they need.

Lucky Buck

MINERAL

LUCKY BUCK USAGE

ANTLER GROWTH

Late winter, 1/3 bucket per site* to freshen up. Then go find some sheds.

When the grass begins to grow, dump a full bucket on each site* and THEN mow your lawn!

Deer will consume an average of one bucket per site* per month between green-up and the end of July.

When antlers are done growing, consumption will naturally drop off. Then get the trail cameras out!

Freshen up your trail camera site* as they use it. 1/3 bucket every couple of months.

After hunting season recharge each site* with 1/3 bucket to help the deer through the stress of rut and winter.

* Estimates based on 25 deer per site

FOLLOW THIS SIMPLE TIMELINE AND PLAN ON BIGGER RACKS THIS FALL!
