

Rapid Response for Sick Calves

Powerful digestive and immune health support for severely sick calves

Fast recovery helps avoid lifelong setbacks. The time it takes to overcome a bout with a severe digestive challenge can affect a calf's ability to reach their genetic potential and negatively impact your bottom line.

Last Stand® w/ImmWave® is the innovative, all-natural paste that quickly delivers digestive and immune health support for critically ill calves. ImmWave® is a novel technology containing select milk proteins designed to help support the young calf's developing immune system when they are most vulnerable.

Since it contains First Arrival® w/Encrypt®, the enhancements built into it now makes all-natural Last Stand® w/ImmWave® an even more powerful tool.

Given orally to a severely sick calf, all-natural Last Stand® w/ImmWave® provides the following ingredients that can help promote a healthy digestive tract and help maintain a functioning immune system.

- Encrypt® contains powerful organic acids, dried kelp, lecithin and absorptive compounds
- Specialized condensed whey solubles
- Dried egg yolk and whole egg proteins
- Mannan-oligosaccharides (MOS)
- Multiple strains of micro-encapsulated lactic acid producing beneficial bacteria
- B Vitamins
- Essential oils
- Vitamin D3

More advanced than any other product in its class

Enhanced Last Stand® with ImmWave® can help calves respond quickly during times of severe digestive challenges, which can help reduce the cost of treatment and time spent by employees taking care of sick calves. It also supports getting them back on track towards reaching their genetic potential, helping avoid potential lifelong setbacks affecting on-farm profitability.

Giving calves the boost they need

- Use at the first sign of digestive challenge, upon arrival from another operation, before leaving the sale barn and prior to shipment.
- Can also be administered to beef calves on day 1 or when they are experiencing severe digestive challenge.
- Producer experience has shown that administering Last Stand® with ImmWave® when calves' ears droop and they first back off milk, can result in a rapid turnaround that can help avoid a prolonged digestive challenge event.
- Newly enhanced Last Stand® with ImmWave® also provides even more powerful immune health support than before.

Give one tube to each sick calf once a day, as needed for up to three days for each event, to support a quick recovery and help avoid lifelong setbacks. Always read and follow label directions.

Available in the following sizes:

- 60-gram, single-dose tube

All-natural ingredients bring benefits

- Does not require a Veterinary Feed Directive (VFD) nor Rx prescription
- Complements other animal health care products and management practices, such as vaccinations, electrolytes and antibiotics
- Requires no meat withhold
- Does not contain any animal slaughter by-products, like bone charcoal, which are banned for use in organic, natural and grass-fed certified production

Organic producers:

Always remember to confirm with your certifier that Last Stand® with ImmWave® is approved for use in your operation.
