

Van Zyverden's
TULIP PERENNIAL MIXTURE

Tulips are the indispensable blooms of the spring garden, as they bring it to life! They are unique in range of size, shape, and bold color, found in almost every color spectrum that only tulips provide. Tulips are good for a wide range of plantings, are excellent in the rock garden, in formal beds, as elegant cut flowers, and good for containers. They can be used in nearly any garden design scheme. Flowers are upward facing, with linear to lance shaped green leaves on the stem. Tulip descriptions can become quite technical, as they are grouped into 15 different divisions - describing the petals, stamens and leaves in detail. Let's just enjoy them for what they are - an incredible source of inexpensive color for the garden. Plant several different varieties of tulips throughout the garden to extend the blooming time. Fun Fact: It typically takes about six years to grow a tulip from seed to flower.

Excellent naturalizer

*Many varieties make up
this wild tulip mixture*

Seasonal best buy

About This Variety: Specie tulips are wild tulips or very close to the wild type. Sometimes they are called 'botanical tulips.' They are commercially grown by professional growers globally. They can be found in Europe, North Africa, and Asia. They are shorter than typical tulips, which makes them ideal for rock gardens and containers. They are often overlooked due to their smaller size. They perform beautifully, perennializing and naturalizing extremely well in USDA zones 3-8. In a mixture, you get lots of bang for your buck, a seasonal best buy!

Growing Instructions: To ensure optimal results, allow adequate space, sunlight, plant at the appropriate depth, feed with a well balanced fertilizer, removing the flowers as soon as they fade, but allowing the leaves to yellow before removing. Best planted late fall. Some gardeners in some areas treat tulips as annuals. For an informal look, plant in groups in natural swathes or bouquets.

Care Tip: In USDA zones 8-10, refrigerate the bulbs for no less than eight weeks. In the garden, plant them before frost, but not as early as in the northern part of the country. Planting them in a lightly shaded area will keep them cool and prolong blooming.

Exposure: Full sun to partial shade

Height: Grows 8-12" tall

Spacing: Plant 4-8" apart, 4-8" deep

USDA Zones: Hardy in USDA zones 3-8

Guaranteed to grow 1 year from purchase if directions are followed. Any concerns related to quality and/or counts feel free to contact us.
