NO ADDITIONAL TOOLS REQUIRED • For best results, follow the Assembly Steps in the order presented.

HOW TO TELL THE DIFFERENCE : Several parts and panels may look similar. Here's how to tell the difference:

CENTER PANELS

The **roof panel (CR)** has an attached wire access door, and a center hole on the frame on both sides.

The **midlevel floor panel (CM)** has a detachable wire divider door, and a center hole on the frame on both sides.

The **ground floor panel (CG)** has NO door and NO center hole on the sides.

The **shelf (CS)** is longer, and has threaded screw holes on the front and back corners of the frame.

FRONT & BACK PANELS : TOP vs BOTTOM

The bottom panels (F2 & B2) have brackets on the corners. Top panels (F3 & B3) do not.

KEY:	CR = Center / Roof
L = Left Side	CM = Center / Mid-Level Floor
B = Back	CG = Center / Ground Floor
F = Front	CT = Center / Tray
R = Right Side	CS = Center / Shelf

Orient the **front legs (F1)** with the windbell lock facing forward.

The extended portion of the **tray channel rail (L1)** also faces forward.

Attach together with a hex screw through the bracket bottom hole.

Orient the **back legs (B1)** with the tray channel backstop facing the back.

Attach legs to sides with hex screws in the bracket bottom holes.

Attach the **shelf (CS)** with hex screws through the holes at the base of the legs.

1 PIECES

2

PIECES

Turn the assembled unit upside down. Fully insert a caster in each leg.

Turn it right-side up and set the floor grille (CG) in place.

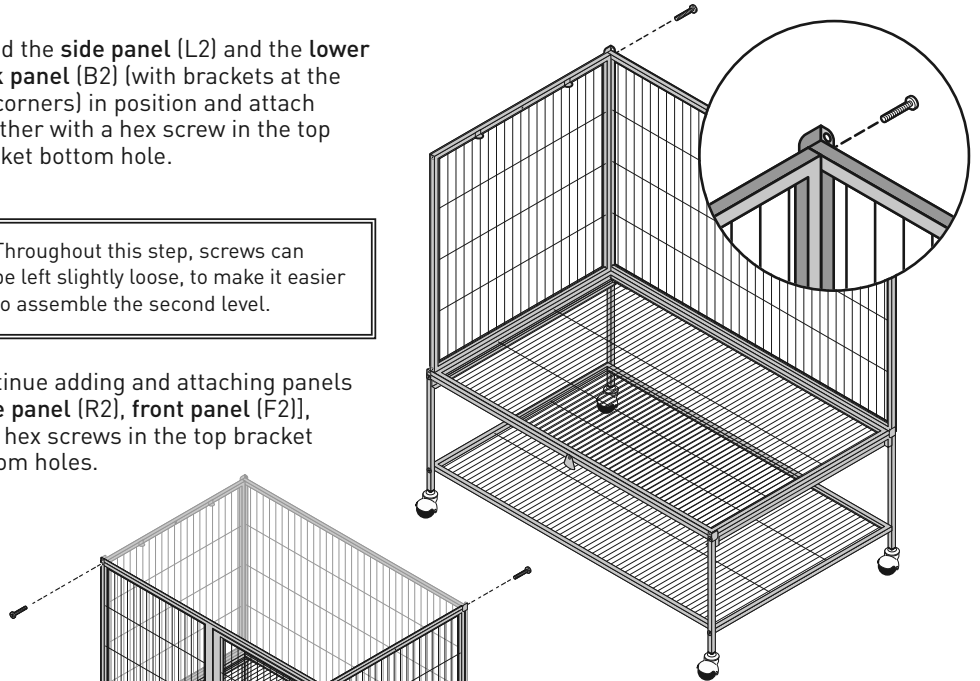

3

PIECES

Stand the side panel (L2) and the lower back panel (B2) (with brackets at the top corners) in position and attach together with a hex screw in the top bracket bottom hole.

* Throughout this step, screws can be left slightly loose, to make it easier to assemble the second level.

Continue adding and attaching panels [side panel (R2), front panel (F2)], with hex screws in the top bracket bottom holes.

Finish by adding screws around the base, in the bottom bracket upper holes.

Place the midlevel floor (CM) (with the removable divider door) in place and secure it with a hex screw on each side.

4 PIECES

Follow the assembly method from Step 3:
Place the **side panel (L3)** and the **upper back panel (B2)** (no brackets) in place and attach together with a hex screw in the top bracket bottom hole.

Continue adding and attaching panels [side panel (R3), upper front panel (F3)], with hex screws in the top bracket bottom holes.

Place the roof (CR) (with the attached sliding door) in position and attach with a hex screw on each side.

***** At this point, go over the entire cage and tighten up all screws until snug.

5 PIECES

Hook a ramp to the underside of a platform. Place the platform in the lower level, on the middle horizontal wire.

Remove the divider door. Hook a ramp on the wire loops, and rest the other end on the platform below. NOTE: The divider may be replaced with the ramp installed.

Add the remaining ramp and platform in the upper level.

Add the hammock.

Rotate the windbell lock up, to slide the tray into place.

Assembly completed. ■
