

TOOLS : No tools are needed • For best results, follow Assembly Steps in the order presented.

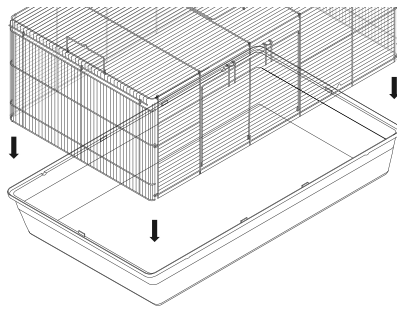

1 PIECES

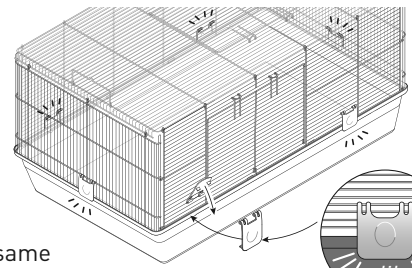

Turn the sides down to form the top.

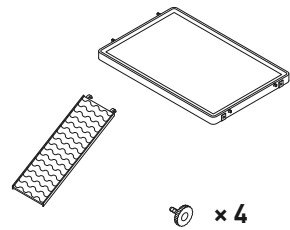

Catch the hooked wires onto the side panels to close the mesh.

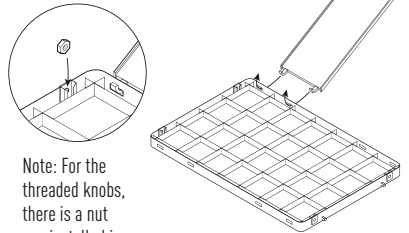

Clips hook onto the same horizontal-height wire. Clamp the clips down onto the base until they click.

2 PIECES

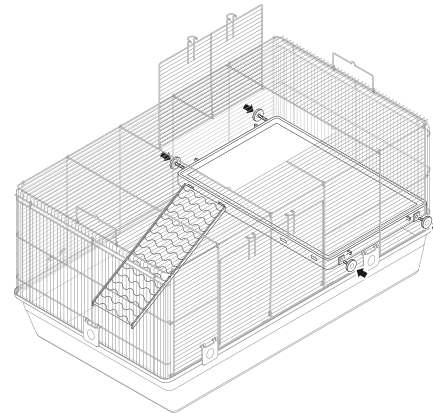

Catch the hooks from the ramp into the openings on the platform.

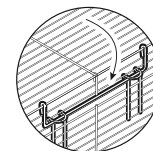

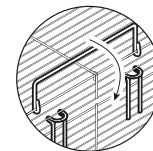

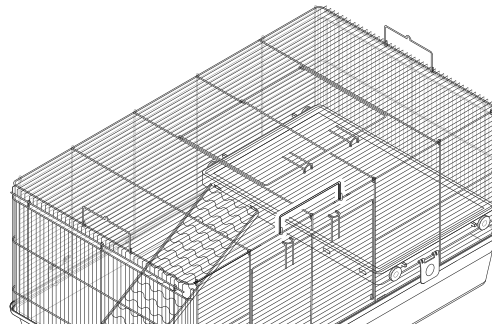

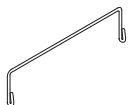

Note: For the threaded knobs, there is a nut pre-installed in four slots under the platform.

Insert the ramp/platform unit into the cage.

Make sure the platform is level. Screw the knobs in from the cage exterior. Tighten to secure the platform in position.

3 PIECES

Door lock clip: Hook the safety clip onto the top horizontal wire, rotate it down and let it catch under the door loops.

This will prevent the door from being pushed open from the inside.
