

Van Zyverden's
APPLE TREE MCINTOSH

Very popular apple eating variety commonly sold in super markets. Its sumptuous fruit is scarlet skinned, thin and smooth, and has a juicy crisp crunch when bitten into. Also makes for an excellent ornamental garden tree.

*Grown both for its fruit
as well as its
ornamental features*

*Apple colored
blossoms in April*

Strong lure to pollinators

About This Variety: Produces delicious apples early in the season. For optimal performance; rooting, growing, fruiting and to keep its height in check it is grafted/budded onto Malus domestica root stock which makes it a premium tree.

Growing Instructions: Plant where it will receive at least six hours of direct, unfiltered sunlight daily. Before planting protect the tree from freezing, overheating, drying out or injury. If the roots have dried, soak them in water about 24 -48 hours before planting. Dig a hole twice the diameter of the root system and two feet deep. Replace some of the loose soil so that the roots can easily penetrate the soil. Spread the roots on top of the soil, planting it at soil level. Firm soil and water well. Do not fertilize at planting time.

Care Tip: Need full sun for maximum flower and fruit production.

Exposure: Full sun

Height: 15-20'

Spacing: Plant- 18-25' apart, soil line deep

Hardy in: USDA zones 4-8

Guaranteed to grow 1 year from purchase if directions are followed. Any concerns related to quality and/or counts feel free to contact us.
