

Van Zyverden's
PLUM TREE METHLEY

Methley Plum trees yield heavy crops of juicy, sweet red-purple fruit that ripens early summer. Distinctive taste making it a excellent choice for jellies and eating.

*Heavy annual crops of juicy,
sweet, red-purple fruit*

*Height increases
some 13-24' per year*

Tolerates heat well

About This Variety: A cultivar of Japanese plum which also makes for a good pollinator for other early bearing Japanese varieties. For optimal performance; rooting, growing, fruiting and to keep its height in check it is grafted/budded onto Prunus persicca root stock which makes it a premium tree.

Growing Instructions: Plant where it will receive at least six hours of direct, unfiltered sunlight daily. Before planting protect the tree from freezing, overheating, drying out or injury. If the roots have dried, soak them in water about 24 -48 hours before planting. Dig a hole twice the diameter of the root system and two feet deep. Replace some of the loose soil so that the roots can easily penetrate the soil. Spread the roots on top of the soil, planting it at soil level. Firm soil and water well. Do not fertilize at planting time.

Care Tip: Tree should be thinned at times for proper fruit development.

Exposure: Full sun

Height: 15-20'

Spacing: Plant- 20' apart, soil line deep

Hardy in: USDA zones 4-9

Guaranteed to grow 1 year from purchase if directions are followed. Any concerns related to quality and/or counts feel free to contact us.
