

60 Piece Construction Fort

CONTENTS

10 GREEN CONNECTORS

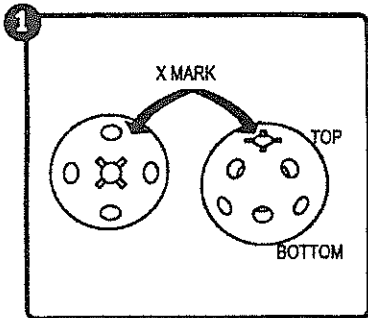

10 BLUE CONNECTORS

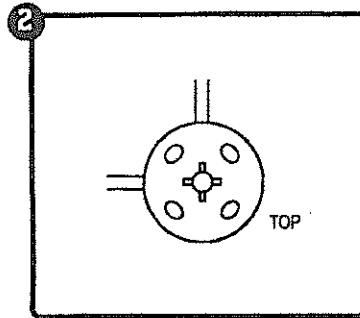

40 BLUE POLES

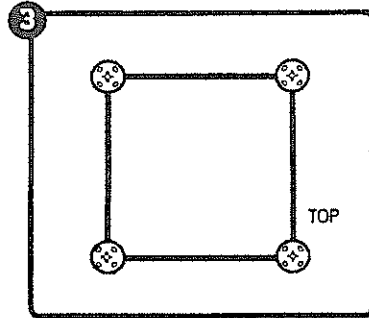

USING YOUR CONSTRUCTION FORT

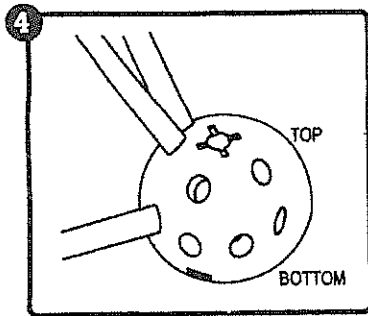

Locate the X marks on top and bottom of your connector.

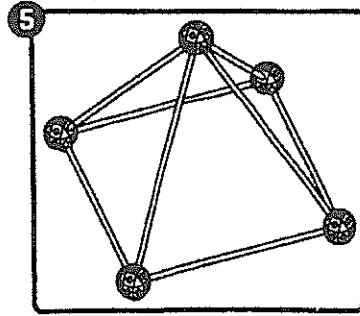

Using the X marks as a reference, insert poles as shown above. It is important that the poles line up with the lines in the X if you want to build angled structures in the next steps.

Position additional poles and connectors in the same way to complete a square shape.

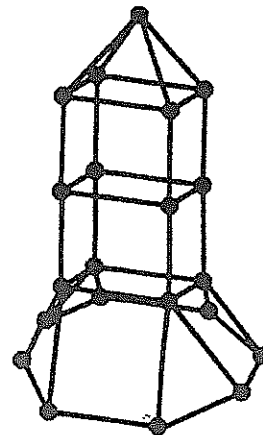

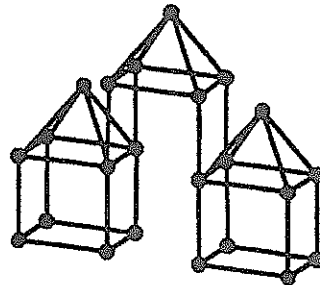

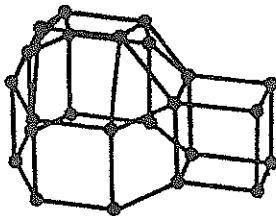

After you have created a basic square, you can build angles with the poles.
NOTE: As shown in the above diagram, line up with the lines on the X, as shown in Step 2. Your connectors and poles must be placed in this position prior to building angles. Otherwise, the holes on the connector will not be positioned correctly to build angles.

Continue adding additional angles to create pyramid shapes.

Now that you have mastered the basics of building forts, use your imagination and build your own creation!

SAFETY WARNINGS - PLEASE READ BEFORE USING PRODUCT

- DO NOT allow children to climb or stand on this product.
- Teach your child how to use the toy and always supervise your child when playing.
- Inspect the product before every use. If the product appears cracked or broken in any manner, discontinue use and discard immediately.
