# EQUINE ELECTROLYTES

*Trace Mineral Electrolytes - All Natural*

## Daily essential minerals for your animal needs.

Veterinarians and Equine Professionals recommend an electrolyte program. Dehydration in horses has serious consequences. Feeding daily electrolytes year-round replaces lost minerals and nutrients that your horse needs to stay hydrated.

**Celtic Sea Salt®** helps in maintaining a healthy electrolyte balance which is necessary for optimum blood composition, muscular strength and overall bodily function.

**Celtic Sea Salt®** minerals like chloride, sodium, magnesium, potassium and calcium contribute to the electrolyte equilibrium, naturally.

Natural minerals in sea salt contain essential trace minerals needed as part of daily health.

**Celtic Sea Salt®** has been hand-harvested then dried by the sun and wind. Our sustainable harvesting methods combine tradition with innovation to serve and preserve the vital balance of the ocean's minerals.

**Celtic Sea Salt®** improves water intake, hair coat, hoof growth and aids in digestion.

**Celtic Sea Salt®** allows horses to receive natural electrolyte minerals without the worry of sugar overload.

*Use as directed:* For all ages and stages of life.

*Serving size:* 1 scoop (scoop equals 20 grams, 1 tablespoon or 14.7cc)

Add **Celtic Sea Salt®** to daily feed or add 2 scoops per 5 gallons of clean water.
