SETTING UP YOUR OVEREZ CHICKEN COOP ELECTRICAL/HEAT PACKAGE

You will need a drill and a hammer to install this package.

WARNING: Working with any and all electrical power can cause injury or even death. The Shed Yard/OverEZ Chicken Coop is not responsible for any installation errors. **DO NOT PLUG INTO POWER SOURCE UNTIL ALL COMPONENTS HAVE BEEN INSTALLED!**

STEP 1: Installing the Switch and Outlet Combo

- A. Attach switch and outlet combo inside your chicken coop (typically above the man door). Using the 3 screws provided, insert them into the pre-drilled holes of the outlet combo box.

STEP 2:

- A. Drill a 1 1/8" hole through the floor between the man door and back wall. Stay close to the man door. Drill all the way through to the outside.
- B. Feed the 50' cord through until there is no excess cord inside the coop. (The cord is the one attached to the switch/outlet combo with a plug on the other end)

STEP 3: Installing the Heat Lamp Light Socket

- A. Plug the heat lamp light socket into the left receptacle of the switch/outlet combo. (This outlet is powered by the switch)
- B. Install the heat lamp light socket on the center rafter 7" from the front wall to center of the light socket, insert the 2 pre-started screws into the rafter.

STEP 4: Installing Additional Outlet (Optional without the OverEZ Automatic Chicken Door)

- A. Plug into the right outlet of the switch/outlet combo.
- B. To install the additional outlet, drive the 2 pre-started screws into the wall plate or wall stud within 2 feet of the top of the OverEZ Automatic Chicken Coop Door (if applicable).

STEP 5: Install with a hammer: Use the wire staples provided in package to fasten all the loose wire/cords. (Recommended) Fasten within 6" to 8" of each box, then approximately every 24" in between. Wire ties can also be used to tie up excess cord
