

SETTING UP YOUR OVEREZ AUTOMATIC CHICKEN COOP DOOR

You will need a drill to install this door.

CONFIRM THAT ALL PARTS ARE PRESENT

1 AUTO DOOR with Motor Control Box Installed

4 Installation Screws

1 Power Adaptor

1 Sticky Backed AUTO DOOR Quick Reference Guide

- STEP 1:** You have the option to:
- A.** Keep your current chicken coop door installed and just keep the door open
 - B.** Totally Remove the current chicken coop door.
(Remove door by removing 6 screws on the outside hinges attached to the chicken coop trim.)
You can put putty in the screw holes and touch up the paint, if desired.
- STEP 2:** REMOVE the two shipping blocks that are holding the moveable door panel in a fixed position. These are located at the rear of the door.
- STEP 3:** Open the hinged Motor Control Box door by holding it in the upper left corner (next to the chicken logo) and pull it towards you.
You need to choose between one of the following options:
- A.** For Electrical Power: Insert power cord in pre-drilled hole at the top of the door frame. Plug the wire into the back of the control panel. Then plug the wire from the control panel into an extension cord or the OverEZ Chicken Coop Electrical/Heat Package Outlet.
 - B.** For Battery Power: Install 4 Double-A batteries in the battery holder. Batteries are not required if electrical power is primary.
- STEP 4:** Place the door in between the 2 studs by the chicken coop door of your coop. Push the door towards the outside until it hits the siding. Fasten with 4 screws provided in the package.
- STEP 5:** *Optional (Recommended)* Seal/Caulk around the outside of the OverEZ Automatic Chicken Coop Door after installation from the siding to the door.

- STEP 6:** Once the unit is powered (with batteries or using the power adaptor), press the RUN/ESC key on the Motor Control Box to wake-up your Auto Door. Device Setup Instructions are built into the Software, however, the sticky backed AUTO DOOR Quick Reference Guide is printed for easy reference.
