

Van Zyverden's
AMARYLLIS KIT CHRISTMAS GIFT WITH ARTISAN DECORATIVE PLANTER

Hippeastrum (commonly known as Amaryllis) are popular for their indoor holiday color and are often given as gifts from October through January. They are easy to grow and are impressive flowers. Their large blossoms can measure up to 8" across. We only ship one large blooming bulb size to ensure well-proportioned plants, which are guaranteed to produce large, vibrant blooms for you. As bulbs are essentially storage mechanisms, they already contain everything needed to produce flowers. They are tropical and subtropical. All you will need to do is plant them and water. Best of all, they can be induced to re-bloom indoors for years to come.

Guaranteed to grow

*Kit comes with everything
one needs to grow this exotic plant.*

Easy holiday indoor color

About This Variety: Our Amaryllis kit comes with everything you need to grow this exotic plant: one large Christmas Gift Amaryllis bulb, a 5x7" trendy, metallic red, metal, artisan decorative outer planter, a 5" nursery pot, planting medium and a set of growing instructions. As bulbs are essentially storage mechanisms, they already contain everything needed to produce flowers.

Growing Instructions: Hippeastrum (Amaryllis) is a tender bulb and needs to be planted in pots indoors throughout most of North America. To grow indoors as a house plant proceed as follows: Expand the soil block which comes with the kit, following the included directions, then fill about half the pot with the medium. Set the bulb atop the soil, filling in with soil around the bulb to maintain its position. About the top third of the bulb should be left exposed above the soil level, leaving room in the pot for watering. Amaryllis bulbs like room temperatures, and exposure to sunshine will keep them shorter. As the flower stalk grows towards the light, rotate the pot frequently to prevent toppling. Sit back and enjoy!

Care Tip: Some gardeners treat their Amaryllis as annuals and simply toss them after flowering. However, they are fairly easily induced to re-flower next year. To re-grow follow these steps: After flowering, cut off the flower stalk just above the neck of the bulb, but be sure to leave the foliage, as it will play a critical role in rebuilding the bulb and prepare it for future blooming. Place the pot in a sunny window and only water when the soil is dry. Fertilize regularly. After danger of frost, place pot outside until fall, when frost kills the leaves off. Then, having removed the foliage, let the potted bulb rest by storing it in a cool, dry place for 2.5 months. Do not water it. Thereafter, restart the process as stated above.

Exposure: Full sun to partial shade

Height: Grows 18-24" tall

USDA Zones: Hardy in USDA zones 9-10

Guaranteed to grow 1 year from purchase if directions are followed. Any concerns related to quality and/or counts feel free to contact us.
