

6 Paperwhite Scent of Winter 15/16 cm

Planting time: Indoors late fall through winter

Flowering time: 6-8 weeks after planting indoors

Height: 14-16" (35-40 cm)

Full Sun to Partial Shade

Planting instructions: Paperwhites may also be grown in a flower pot with soil. Select a pot with a drain hole and fill it half way with a good quality potting soil. Place the bulbs in pointed end up and fill the rest of the pot with soil. Water well and put in a dark place until sprouts begin to grow. Then move the pot into bright light. Remember to keep the bulbs moist but not soggy. Cool temperatures will keep the flowers fresher longer. Paperwhites should be in bloom within 6-8 weeks of first watering. All of our bulbs are grown from cultivated stock.

CAUTION: Harmful if eaten.
