Deep beneath the ground in Redmond, UT, lies a salt deposit that has remained untouched for millions of years. During the Jurassic period, an ancient inland sea known as the Sundance Sea, covered much of the Western United States. Over the course of millions of years, the sea eventually dried up and formed a large mineral deposit. This deposit is where we mine Jurassic Rock, an untouched naturally occurring mineral rock that is packed with all of the minerals that deer love.

## DIRECTIONS FOR USE:

Clear a 4x4 area on the ground and pour out the CRUSHED Jurassic Rock. Throughout a few rain cycles the product will disappear, soaking into the earth creating a mineral lick. Continue to refresh throughout the year as needed. Best used in combination with 12lb Jurassic Rock to kick start your mineral site
