Instructions

Place it & fill it. It's really that easy!

1. Lay in desired location.
2. Remove cap, insert hose & turn on water.
3. When filled, remove hose & replace cap.
4. To drain, remove cap & lift opposite end of curb to the spout.
5. Store away for later.

Quick Tips

1. Once filled they can be heavy and difficult to move.
2. In freezing weather, fill 2/3 full.
3. Fill to desired height & guide pockets of air toward the fill nozzle & out.
4. To increase the length, overlap by a few inches in front or behind to prevent water from seeping in between.
5. The 6.5in unit can be driven over as long as there is room for water displacement & the height of the filled barrier is less than the height of the auto undercarriage, you can drive over it slowly. The extended pockets on either end provide extra room for displacement, so remove as much air as possible before replacing the fill cap.
