

Van Zyperden's
WOODLAND PLANT LADY FERN

Ferns are grown for their green deciduous fronds that provide dramatic effect. Excellent selection for wet areas along ponds, streams, water gardens or bogs. Also grows well in shaded borders, woodland gardens, wild gardens or native plant gardens. May also be planted along walls or foundations, and makes for a good plant for massing on slopes to prevent soil erosion.

*Plant woodland plants
to assure their survival*

*Perfect companion for our
Trilliums and Virginia Bluebells*

Tolerates heavy shade

About This Variety: Athyrium filix-femina, better known as Lady Fern, is deciduous, and native to the more temperate regions of North America, Europe and Asia. The erect fronds grow in a circular clump like form. Its natural habitat is rich moist woods, fields, meadows and ravines and all sort of shaded gardens.

Growing Instructions: Part shade to full shade is preferred. Regular watering and a layer of mulch are beneficial.

Care Tip: Equally happy in average or moist soil; Ferns will grow in sun with constant moisture. Not fussy, it adapts well to less than ideal conditions. Cut back fronds as they die out in hot summers.

Exposure: Partial shade to full shade

Height: Grows 12-36" tall

Spacing: Plant 18" apart, 0.5" deep

Hardy in: USDA zones 3-9

Guaranteed to grow 1 year from purchase if directions are followed. Any concerns related to quality and/or counts feel free to contact us.
