

LockDown Hitch Pins are

- *self-locking*
- *vertical hitch pins*

The locking mechanism is

- *gravity actuated*
- *held in place by its own design*

LockDown Hitch Pins replace the need for cotter or similar accessory pins that must be inserted into the bottom hole of the hitch pin. Made from heat treated grade 5,

C40 steel that has been gold oxide plated. Cut with a chamfered edge to minimize any possible distortion of a corner when struck by an outside force.

Coiled spring pins that are used as the pivot point are made from high strength, hardened stainless steel. Used to connect any tractor or truck to field implements, wagons, trailers, spreaders, mixers and more.

Sizes in diameters:

1 1/8" x 9"	1" x 8"	7/8" x 7"	3/4" x 7"	5/8" x 5"
-------------	---------	-----------	-----------	-----------
