

Tools Designed To Keep You Safe Wherever The Job Takes You

Meets The International Standard For Live Line Working IEC 60900:2012 and ASTM F1505

- Every tool is 100% inspected - tested to 10,000 volts / rated to 1,000 volts
- Virtually indestructible - cut, abrasion, and impact resistant
- Withstands temperature extremes from -40° F to 158° F (-40° C to 70° C)
- Slip-resistant textured surface provides improved grip

Engineered Nylon 11 Injection Molding Provides Maximum Personal Protection

Our tools are manufactured using a proprietary engineered Nylon 11 injection molded material for maximum strength and adhesion to the tool. Our material selection and manufacturing process offer superior performance and durability compared to other insulated tools using push-on or dipped-grip PVC handles.

In addition to being flame-retardant and exceeding high-temperature testing (158° F), our tools meet the rigorous requirements of Category "C" - Cold Impact. While many competitors meet the standard -20° F impact testing, our products successfully pass cold-impact testing down to -40° F.

Limited Lifetime Warranty

Backed by our industry leading Lifetime Limited Warranty, we are proud to offer our customers the toughest, longest-lasting and safest 1,000 volt rated insulated hand tools on the market today.
