

Insulated Hand Tools

Maximum Safety. Maximum Durability.

 1000V

Tools Designed To Keep You Safe Wherever The Job Takes You

Meets The International Standard For Live Line Working IEC 60900:2012 and ASTM F1505

- Every tool is 100% inspected - tested to 10,000 volts / rated to 1,000 volts
- Virtually indestructible - cut, abrasion, and impact resistant
- Withstands temperature extremes from -40° F to 158° F (-40° C to 70° C)
- Slip-resistant textured surface provides improved grip

Engineered Nylon 11 Injection Molding Provides Maximum Personal Protection

Our tools are manufactured using a proprietary engineered Nylon 11 injection molded material for maximum strength and adhesion to the tool. Our material selection and manufacturing process offer superior performance and durability compared to other insulated tools using push-on or dipped-grip PVC handles.

In addition to being flame-retardant and exceeding high-temperature testing (158° F), our tools meet the rigorous requirements of Category "C" - Cold Impact. While many competitors meet the standard -20° F impact testing, our products successfully pass cold-impact testing down to -40° F.

Limited Lifetime Warranty

Backed by our industry leading Lifetime Limited Warranty, we are proud to offer our customers the toughest, longest-lasting and safest 1,000 volt rated insulated hand tools on the market today.

GUIDELINES FOR HAND TOOL SAFETY

(Sources: Health & Safety Executive, OSHA Standards, IEC (International Electrotechnical Commission))

The following is intended as a general guide. It is not a comprehensive overview of health and safety standards.

- Check work area for trip hazards, unsafe equipment and potentially flammable materials
- Ensure equipment being worked on is securely mounted in place.
- Know the locations of trip (cut-out) switches, fire extinguishers and escape routes.
- Wear approved personal protective equipment for working conditions (safety glasses, gloves, masks, safety shoes etc.).
- Never wear loose clothing.
- Never wear hand jewelry in electrical hazard situations.
- Always use correct tool for task.
- Always use correct size tool for application.
- Always disconnect electrical supply when performing maintenance tasks on powered equipment.
- For electrical or live line work, use only approved tools according to international and national standards.
- When maintaining electrical equipment In extreme cold climate conditions, use only approved insulated hand tools rated to IEC 60900:2012 Category “C”.
- Regularly inspect insulated tools for the integrity of the insulation before each task.
- Regularly maintain tools and discard damaged tools
- Ensure cutting edge tools are sharp. Blunt tools are prone to slip.
- Dispose of sharp blades in approved sharps containers.
- Always cut away from the body.
- Wrenches should always be pulled not pushed.
- Never use a screwdriver as a chisel or pry bar.
- Store tools safely.
