How To Start a Fire: **campfire**

Fatwood is safe, quick and easy to use. It's 100% All Natural with no chemicals or additives of any kind. Only 2 to 3 sticks are needed to start a fire.

Place 2 Fatwood Firestarter sticks into the firepit, crossed over each other in an X shape. For best results cross them over a wood stick, which will elevate them for better air-flow.

Add medium to large firewood around the Fatwood sticks, in the shape of a pyramid. Allow the Fatwood to stick out approximately 2 inches from the pyramid.

Light the ends of each Fatwood stick with a match. As the fire grows, add additional firewood.

Enjoy your campfire.
