SEMI-PNEUMATIC TIRE ASSEMBLY

Solid Tire

Semi-Pneumatic Tire

What Are Semi-Pneumatic Tires?

Semi-pneumatic are good replacement tires for zero-turn mowers and other lawn equipment. They are made of dense, molded rubber with a hollow air-pocket through the center of the tire. On the outside, semi-pneumatic tires look like regular pneumatic tires, but they do not have tubes or valve stems thus inflation is not needed.

Semi-pneumatic tires benefits:

- Flat free
- Inflation free
- Longer life time
- Pneumatic-like cushion
- Higher load carrying capacity
