

POOL SALT

Quick Dissolving for Swimming Pools

Pool Salt:

Bare Ground pool salt is the quick dissolving alternate to chlorine treated pool water. Bare Ground pool salt is mined to the purest high quality. It is an all natural fine grained salt product made specifically for pools with saltwater chlorinators. Our box with an inner plastic liner bag insures that your salt stores safely and keeps dry until it is ready for use. Unlike bags, the rigid corrugated box makes it easier to lift and store. We recommend always storing in a dry protected location.

Directions for Usage:

Test your pool water to make certain that you are maintaining a target salt water level of 3,500 ppm and add salt as required by referring to this convenient chart below. Disperse salt through the saltwater chlorinator or disperse over the surface with the greatest concentration of application in the deeper end of the pool. The salt should fully dissolve in 3-5 minutes. Retest again after application to be sure that you have attained the desired salt concentration level.

| CURRENT SALT LEVEL | STANDARD POOL DIMENSIONS | | | | | | |
|--------------------|--------------------------------------|---------------------------------------|---------------------------------------|---------------------------------------|---------------------------------------|---------------------------------------|---------------------------------------|
| | 12' x 24' 9,500 to 11,000 gallons | 14' x 28' 13,000 to 15,000 gallons | 15' x 30' 13,900 to 15,200 gallons | 16' x 32' 17,300 to 20,000 gallons | 18' x 36' 22,500 to 24,500 gallons | 19' x 39' 24,400 to 27,500 gallons | 20' x 40' 30,000 to 34,000 gallons |
| 0 PPM | 8 bags | 11 bags | 11 bags | 15 bags | 18 bags | 20 bags | 25 bags |
| 1,000 PPM | 6 bags | 8 bags | 8 bags | 10 bags | 13 bags | 14 bags | 18 bags |
| 2,500 PPM | 2 bags | 3 bags | 3 bags | 4 bags | 5 bags | 6 bags | 7 bags |

For the fastest dissolve times: Evenly pour the Pool Salt over the surface area of the water while walking around the edge of the pool, concentrating more salt towards the deepest end of the pool.

Storage: Store in a dry place. If clumps form, shake bag gently to free granules.
