

Our TERRO Spider & Insect Traps are ideal for families as the traps are non-toxic and can be folded up. Folding the trap allows less access to the sticky glue for children and pets, but insects still can find a way inside! This trap can kill the "Big 3" which includes the black widow spider, brown recluse, and hobo spider. Not only is this trap for spiders but also for other insects such as ants, crickets, and cockroaches. To use the trap simply remove the backing from the sticky surface and place in a high traffic area. If you don't want to use it flat, fold the trap along the marked lines and after removing the backing. Fold the trap to create an open box style. High traffic areas for insects include along baseboards, in corners, and underneath furniture to name a few.
