

HUD -1 EZ BUILDING CARE AND MAINTAINENCE

- We recommend the structure be stained with a weatherproof type product after installation for best color results.
- We recommend assembly and construction begin as soon as the package is opened. The building MUST be placed on a level and square solid foundation.
- We recommend to not leave material laying out over an extended amount of time – especially in direct sunlight – as this may cause warping and/or damage – especially to smaller component pieces such as trim boards, hardware, etc...
- We recommend to place a roof covering as soon as the structure is completed to avoid damages and leaks of the interior floor boards.
- We recommend the use of a rubber or wood mallet only during construction of the structure. A hammer should only be used with the blocks provided to set the wall, window, and door selections.
- Only place nail and screws in recommended areas as outlined in the instruction manual.
- Adjust all windows and doors by turning the exterior hinges clockwise or counter-clockwise until alignment is made.
- Do not modify any piece of the structure unless it is noted in the instructions it is Ok to do so.
- For additional assistance or questions, please contact us at info@hud1group.com or at 731-574-8702.
