

Van Zyverden's
MAMMOTH PAPERWHITE

Paperwhites are non-hardy tazetta daffodils that can be forced and grown inside the home without any cold exposure, special handling, or treatment. Fun and easy to grow in pots, on water and/or a favorite vessel.

Easy to grow holiday color

Timeless beauty

*Largest mammoth
bulbs commercially available*

About This Variety: Timeless beauty, sweet perfume, and absolute dependability have made Paperwhites Narcissus the absolute all-time favorite bulb for indoor forcing in winter. Clusters of pure white blooms will come 4-6 weeks after potting. Very easy to grow, no special handling or treatment is required. Each bulb is so huge that it will likely grow 3 to 4 stems per bulb. Due to their size, they are best spaced further apart than normal, thus requiring fewer bulbs per planting vessel. A Van Zyperden unique special offer for this bulb size because these are not commonly available at local nurseries nor box stores.

Growing Instructions: Pot Paperwhites as soon as you receive them, or store them in a warm, dry place until you are ready to plant. Yes, this is quite the contrary to how regular daffodils should be handled.

Care Tip: They are best rooted at cooler temperatures, below 60F. Once rooted, a somewhat warmer house temperature is preferred. But not too hot or too dry an environment, as it may hinder flowering. Also, the less light they receive, the taller they will grow.

Exposure: Full sun to partial shade

Height: Grows 12-24" tall

Spacing: Plant 6-8" apart, 6" deep

USDA Zones: Hardy in USDA zones 8-10

Guaranteed to grow 1 year from purchase if directions are followed. Any concerns related to quality and/or counts feel free to contact us.
