

DeTour Gel

RAT REPELLENT

Non-Toxicant

DETOUR GEL FOR RATS is an EPA-Registered, NSF-Certified, US-Patented, 100% non-toxic, all-weather, chemical-free, contact repellent gel that has been proven to repel and deter rats from congregating and returning to a home, business, warehouse, factory, workplace or other structures. With the identical formula as our NSF-Certified PIGNX Bird Repellent, this gel can be used safely in restaurants, hotels, hospitals, supermarkets, convenience stores, schools, food storage rooms and food preparation areas.

NEW INNOVATIVE TECHNOLOGY :

Our biotechnology combines pharmaceutical-grade organic capsaicin, a natural component of hot chili peppers, with our proprietary clear, odorless, non-staining, weatherproof food-grade mineral oil gel that provides long-lasting protection from unwanted rats and other rodents. Our gel's superior durability and adhesion allows application on almost any surface and in ANY climate no matter how hot, cold, wet or dusty.

HOW IT WORKS: Upon initial contact with DeTour Gel for Rats, problem rodents experience a sharp, but safe burning or tingling sensation. In most cases, this discomfort causes the affected rats to avoid or leave the targeted area entirely. DeTour Gel for Rats elicits a stress response that will lower the rodent's normal shyness towards new objects. **This enhances the effectiveness of existing traps and baits.** This unique product uses the actual rodent as its own delivery system.

WHERE TO APPLY: Apply DeTour Gel for Rats along walls as well as inside and outside of entryways. Apply under counters, by drains, along electrical conduit, inside cracks and crevices in walls and around any area that normally collects food scraps and attracts rats and other common pests.

HERE'S WHY YOU SHOULD BE USING DETOUR GEL FOR RATS... NOW!

- **EPA-Registered #84418-1:** Thoroughly tested to be effective, consistent, long-lasting & accurately labelled
- **NSF-Certified:** Safe for use around humans, animals & the environment
