DETOUR GEL FOR RATS

100% Non-Toxic Bio-Repellent

DETOUR GEL FOR RATS is an EPA-Registered, NSF-Certified, US-Patented, 100% non-toxic, all-weather, chemical-free, contact repellent gel that has been proven to repel and deter rats from congregating and returning to a home, business, warehouse, factory or workplace. With the identical formula as our NSF-Certified bird repellent, this gel can be used just as safely in restaurants, hotels, supermarkets, convenience stores, schools, food storage rooms, and food preparation areas.

NEW INNOVATIVE TECHNOLOGY: Our biotechnology combines pharmaceutical-grade organic capsaicin, a natural component of hot chili peppers, with our proprietary clear, odorless, non-staining, weatherproof food-grade mineral oil gel that provides long-lasting protection from unwanted rats. Our gel's superior durability and adhesion allows application on almost any surface and in ANY climate no matter how hot, cold, wet or dusty.

HOW IT WORKS: Upon initial contact with DETOUR GEL FOR RATS, problem rodents experience a tingling sensation. In most cases, this discomfort causes the affected rats to leave quickly and not return.

WHERE TO APPLY: Apply DETOUR GEL along walls as well as inside and outside of entryways. Apply under counters, by drains, along electrical conduit, inside cracks and crevices in walls and around any area that normally collects food scraps and attracts rats and other common pests.

HERE'S WHY **YOU** SHOULD BE USING DETOUR GEL FOR RATS....**NOW!**
