## HALO LIGHTING ELIMINATES TUNNEL VISION

The FLEXIT Headlamp PRO combines comfort & ergonomics with performance & usability. The low profile design features side mounted C.O.B. flood LEDs that deliver 240° halo lighting. This illuminates the user's peripheral vision in all directions, while the adjustable center perch houses a CREE spotlight projecting 650 lumens far into the darkness. This LED layout eliminates the tunnel vision created by most competitor headlamps.

TUNNEL VISION IS ELIMINATED BY UTILIZING SIDE MOUNTED FLOOD C.O.B. LEDS THAT CREATE 240° WIDE VIEW "HALO STYLE" LIGHTING

C.O.B. FLOODLIGHT

CREE SPOTLIGHT

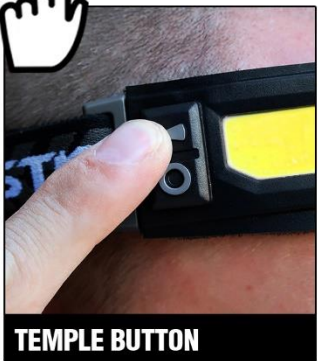

COMFORT FIT AND BALANCE

TEMPLE BUTTON

Conveniently located on the temple of your head, users can individually control the spotlight & floodlight. Hold either temple button down to dim or brighten the lights independently.

ADJUSTABLE SPOTLIGHT

The low profile center spotlight is flexible, allowing the user to aim the direction of the spotlight directly at their focal point. The spotlight perch will hold any angle it is set to, even during vigorous activity.

FLOODLIGHT + SPOTLIGHT

Tunnel vision is eliminated by utilizing side mounted flood LEDs that create 240° wide-view "HALO style" lighting. These floodlights illuminate the users peripheral vision while the spotlight pinpoints the focal point in the distance.

RED NIGHT VISION

The C.O.B. LEDs feature red mode. Red LEDs do not appear as bright to the human eye, therefore they won't diolate the eyes as much as white. Use the red mode when wanting to preserve your eyes natural "night vision".

LIGHTWEIGHT + LOW PROFILE

Weighing in at only 5.8oz, the light-weight low-profile design conforms to the specific user, keeping all mass close to the head and evenly distributed.

**COMFORT FIT FOAM**

Equipped with a substantial 3350 mAh lithium-ion rechargeable battery, this headlamp has the battery capacity to back up its powerful LEDs. The battery can be charged via USB inside the case, or instantly swapped with a backup battery. This is an essential feature for long trips or emergency situations where charging isn't an option.

All red color modes are independently operated by their own button located on the battery case. Users can choose to operate the white front mounted LEDs with or without red lighting. Modes include a solid or flashing red tail light, 360° red night vision, and an emergency strobe mode that can be used with or without the white spotlight.

The rear facing red light and side mounted flood lights blink, while the focal spotlight remains solid on high power. This is an amazing safety feature that ensures that the user is seen from all angles, while still allowing the user to adequately illuminate the task at hand. Essential for roadside safety!

The FLEXIT Headlamp PRO can easily be worn all night thanks to a laminated layer of foam and soft-touch felt, which not only emulates a pillow like softness, but also controls sweat in hot environments.
