

DRYDEX Spackling

DRY TIME INDICATOR

U.S. PATENT 6,531,528

GOES ON PINK DRIES WHITE

DAP® DryDex® Spackling provides a unique dry time color indicator that verifies when your patched surface is dry & ready to be sanded & painted, eliminating the guesswork & reducing the chance of errors. Its ready-to-use formula spreads easily for fast, professional repairs that will not crack, crumble or flake.

DIRECTIONS

1. Surface must be clean, dry & free of foreign material.
2. Stir thoroughly before use.
3. Apply with a clean putty knife.
4. One application is usually sufficient for small repairs. For repairs deeper than 1/8", apply 2 or more layers allowing to dry between applications.
5. Spackling will change color to white when surface can accept a second application or is ready to be sanded or painted in approximately 1 to 5 hours.

CLEAN-UP & STORAGE

- Wash tools immediately after use with water.
- Dried material must be removed by scraping or sanding.
- Be sure container lid/cap is closed and tightly sealed.
- Store in a cool, dry place.

Dries
WHITE

Won't Shrink or Crack • No Priming Required

DRYDEX Spackling

DRY TIME INDICATOR

U.S. PATENT 6,531,528

HELPFUL TIPS

- De-gloss surface with sandpaper for better adhesion to the drywall.
- Use the back of a putty knife to knock down any rough edges of the repair to create a smooth surface.
- Using a flexible putty knife will provide the best application experience when applying spackling compound.
- Overfill the repair slightly when applying so you can sand it down to a smooth, flat finish when dry.
- For a smoother finish, dip putty knife into water & lightly smooth spackling prior to drying.
- Dual-grit sanding using medium (60 to 100-grit) and finishing with fine (120 to 220-grit) sandpaper will help achieve a smooth finished repair.

FOR BEST RESULTS

- Do not apply when temperatures are below 50°F.
- Do not apply outside if rain is expected within 24 hours.
- Do not use on floors or as a caulk, sealant or joint filler over cracks and joints where expansion and contraction may occur.
- DO NOT USE AS A SKIM COAT.
- For exterior applications, always topcoat with a good quality exterior grade paint.
- If a textured finish is desired, add clean sand to spackling compound prior to application.
- Do not use for tuck pointing applications on brick.
- For larger areas to be patched on bare concrete, use a latex fortified Portland cement-based dry mix.

Dries WHITE*

When Ready to Sand & Paint

No Priming Required

Won't Shrink or Crack

SUGGESTED USES:

Ideal for filling holes, cracks, dents and defects on:

- Drywall
- Plaster
- Wood
- Stone
- Brick

PHYSICAL PROPERTIES:

| | |
|--------------------------|---|
| Application Temp: | 50°F or higher |
| Service Temp: | 0°F to 150°F |
| Shelf Life: | 1 year |
| Freezing: | Freeze/thaw stable 5 cycles at 0°F |
| Odor: | Mild |
| Dry Time: | 1 to 5 hours depending on temperature, humidity and depth of fill |
