

Assembly / Operation Instructions / Parts

25 GALLON TRAILER SPRAYER

MODELS #LG25STS & LG25DTS

GALLON TRAILER SPRAYER

- Compact Trailer and Tank
- Polvethylene Tank
- 4.10/3.50 x 6 Pneumatic Tires
- 12 Volt Diaphragm Pump
- 2.2 G.P.M.
- Lever Handgun

- 15 Ft. of 3/8" Hose (Handgun)
- Pressure Gauge
- Adjustable Pressure Range (0-60 PSI Max.)
 Break Away Boom-2 nozzles, 80" Coverage with check valve and filter

- GENERAL INFORMATION

The purpose of this manual is to assist you in assembling, operating and maintaining your lawn and garden sprayer. Please read it carefully as it furnishes information which will help you achieve years of dependable trouble-free operation.

— WARRANTY / PARTS / SERVICE

Workhorse products are warranted for one year from the date of purchase against manufacture or workmanship defects for personal or homeowner usage with proof of purchase. Workhorse products are warranted for 90 days for commercial users. Any unauthorized modification of a Workhorse brand sprayer will void warranty.

Your authorized dealer is the best source of replacement parts and service. To obtain prompt, efficient service, always remember to give the following information: 1) Correct part description and part number. 2) Model number and serial number of your sprayer.

Part description and part numbers can be obtained from the illustrated parts list section of this manual.

Whenever you need parts or repair service, contact your distributor / dealer first. For warranty work always take your original sales slip, or other evidence of purchase date, to your distributor / dealer.

WARNING: Some chemicals will damage the pump valves if allowed to soak untreated for a long period of time. Always flush the pump with water after use. Do not allow chemicals to sit in pump for extended times of idleness Follow chemical manufacturers instructions on disposal of all waste water from the sprayer.

ASSEMBLY INSTRUCTIONS

Tools required:

2 — 7/16" End Wrenches

1 — 9/16" End Wrench

1 — Thread Sealant1 — Blade Screwdriver

1 — Pliers

1 — 1/2" End Wrench 1 — 3/4" End Wrench

- OPERATION

The pumping system draws solution from the tank, through the strainer and to the pump. The pump forces the solution under pressure to the boom nozzles and spray wand.

The pump has a pressure switch which will shut the pump off when it reaches 60 PSI.

Pressure may be regulated by opening or closing the valve located on the top of the tank. See "Valve Operation" illustrated in this manual.

The nozzles on the boom will spray an 80 inch wide swath. Check the nozzle spray pattern by spraying water on a concrete surface.

Regularly inspect the suction supply screen on the inside of the tank. Flush with water to clear any accumulated debris.

— TIP CHARTS

						0411	ONG DED			TED 4011		
Tip N	- 1	sure Capacity			E MADU /	GALLONS PER ACRE BASE ON WATER-40" SPACING						

Tip No.	Pressure	Capacity	GALLONS PER ACRE BASE ON WATER-40" SPACING					
	(PSI)	(GPM)	5 MPH 440 FPM	6 MPH 528 FPM	7 MPH 616 FPM	8 MPH 704 FPM		
5	10	0.50	14.9	12.4	10.6	9.3		
	20	0.71	21.0	17.6	15.1	13.2		
	30	0.87	26.0	22.0	18.5	16.1		
	40	1.00	30.0	25.0	21.0	18.6		

Most chemical labels indicate a chemical application rate in 1,000 sq. ft.; if the rate on the label is indicated as a rate per acre, divide the per acre rate by 43.56 to convert to a rate per 1,000 sq. ft

1 Acre = 43,560 sq. ft. 1 gallon per 1,000 sq. ft. = 43.56 gallons per acre 1 fl. Oz. = 2 tablespoons

1 cup = 8 fl. Oz.

1 pint = 2 cups = 16 fl. Oz. 1 quart = 2 pints = 32 fl. Oz.

1 gallon = 4 quarts = 8 pints = 128 fl. oz.

SPEED CHART

Speed in MPH	Time Required in Seconds to Travel a distance of:					
(Miles Per Hour)	100 ft.	200 ft.	300 ft.			
1.0	68.0	136	205			
2.0	34.0	68	102			
3.0	23.0	45	68			
4.0	17.0	34	51			
5.0	14.0	27	41			
6.0	11.0	23	34			
7.0	9.7	19	29			
8.0	8.5	17	26			
9.0	7.6	15	23			
10.0	6.8	14	20			

CALIBRATION

Chemical labels may show application rates in gallons per acre, gallons per 1000 square feet or gallons per 100 square feet. You will note that the tip chart shows all three of these rating systems.

Once you know how much you are going to spray then determine (from the tip chart) the spraying pressure (PSI), and the spraying speed (MPH).

Conditions of weather and terrain must be considered when setting the sprayer. Do not spray on windy days. Protective clothing must be worn in some cases. **Be sure to read the chemical label carefully.**

Determining the proper speed of the tractor can be done by marking off 100, 200 and 300 feet. The speed chart indicates the number of seconds it takes to travel the distances. Set the throttle and with a running start travel the distances. Adjust the throttle until you travel the distances in the number of seconds indicated by the speed chart. Once you have reached the throttle setting needed, mark the throttle location so you can stop and go again (returning to the same speed).

Add water and proper amount of chemical to tank and drive to the starting place for spraying.

When you are ready to spray, turn the boom valve to the "on" position. This will start solution spraying from the tips once the pump is turned on. The pressure will decrease slightly when the boom is spraying.

AFTER SPRAYING

After use, fill the sprayer part way with water. Start the sprayer and allow clear water to be pumped through the plumbing system and out through the spray nozzles.

Refill the tank about half full with plain water and use a chemical neutralizer such as Nutra-Sol® or equivalent and repeat cleaning instructions. Flush the entire sprayer with the neutralizing agent. Follow the chemical manufacturer's disposal instructions of all wash or rinsing water.

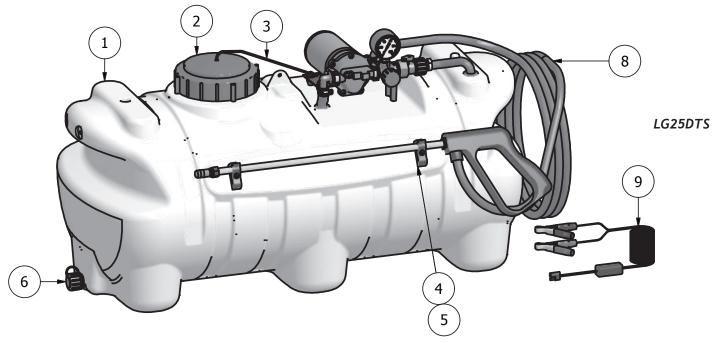

Remove tips and screens from the boom. Wash tips thoroughly with water or cleaning solution (appropriate for chemical used). Blow out orifice, clean and dry. If orifice remains clogged clean it with a fine bristle (not wire) brush, or with a tooth pick. Do not damage the orifice. Water rinse and dry tips before storing.

- WINTER STORAGE

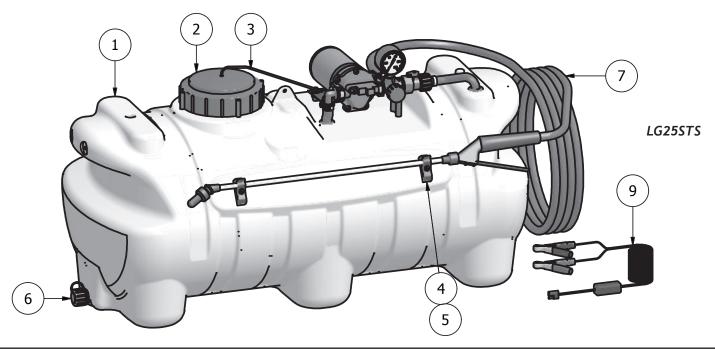

Drain all water and chemical out of sprayer, paying special attention to pump and valves. These items are especially prone to damage from chemicals and freezing weather.

The sprayer should be winterized before storage by pumping a solution of RV antifreeze through the entire plumbing. Proper care and maintenance will prolong the life of the sprayer.

WARNING: This product can expose you to chemicals including lead, which is known to the State of California to cause cancer. www.P65Warnings.ca.gov

Assembly Instructions

1.0-- Assemble the tank and trailer frame as illustrated using hardware shown. Note the orientation of the Frame Memeber items as their orientation is essential for proper assembly. (The Stop Pad on the Frame Tube should go against the tank)

0

Note orientation of — Axle Frame Member. Must be assemblied as shown for unit to function properly.

WORKHORSE SPRAYERS', a division of Green Leaf, Inc. 9490 N BALDWIN ST FONTANET, IN 47851 www.workhorsesprayers.com 888-433-6631

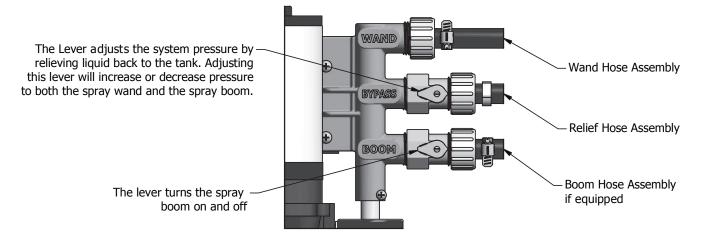

ITEM 5.0 GPM Pump* Manifold Body Elbow (2.2 pumps) Elbow (4.0 & 5.0 pumps) Gauge 0-100 PSI Inline Valve **QD EL 12** 5/8" Hose Clamp 1/2" Hose Clamp 10-24 x 1.25 Screw Relief Hose Assembly Suction Hose Assembly Cap Assembly (not shown)

Install Wand Hose Assembly onto Swivel Barb Assembly, by placing a Hose Clamp over the open end of the hose on the Wand Hose Assembly. Then pressing the open end of the hose onto the Swivel Barb Assembly like shown. Secure in place by tightening the Hose Clamp as shown.

^{*}Pump included depends upon model purchased.

12 Volt DC Motor-Driven Diaphragm Pumps

3300 Series: 2.2 GPM

PUMP INFORMATION:

Type - 3 chamber diaphragm pump, self priming, capable of being run dry

Pressure Control - Demand

Liquid Temperature - 140°F (60°C) Max. Priming Capabilities - 8 feet (2.4 m) Max Pressure - 200 PSI (14 bar) Inlet/Outlet Ports - 3/4" Quick Attach Weight - 6 lbs (2.7 kg)

MOTOR INFORMATION

Leads - 14 AWG, 7" long with 2-Pin

Temperature Limits - Motor is not equipped with thermal protection. For user safety, optimal performance, and maximum motor life, the motor surface temperature should not exceed 180°F (82°C)

3200 Series: 3.2-4.0 GPM

PUMP INFORMATION:

Type - 3 chamber diaphragm pump, self priming, capable of being run dry

Pressure Control - Demand

Liquid Temperature - 140°F (60°C) Max. Priming Capabilities - 10 feet (3 m) Max Pressure - 100 PSI (6.9 bar) Inlet/Outlet Ports - 3/4" Quick Attach

Weight - 5 lbs (2.3 kg)

MOTOR INFORMATION

Leads - 14 AWG, 7" long with 2-Pin

Temperature Limits - Motor is not equipped with thermal protection. For user safety, optimal performance, and maximum motor life, the motor surface temperature should not exceed 180°F (82°C)

5500 Series: 4.0-5.3GPM

PUMP INFORMATION:

Type - 5 chamber diaphragm pump, self priming, capable of being run dry

Pressure Control - Demand

Liquid Temperature - 140°F (60°C) Max.

Priming Capabilities - 14 feet (4 m)

Max Pressure Capabilities - 150 PSI (10 bar)

Inlet/Outlet Ports - 3/4" Quick Attach

Weight - 8 lbs (3.62 kg)

MOTOR INFORMATION

Leads - 14 AWG, 7" long with 2-Pin

Temperature Limits - Motor is not equipped with thermal protection. For user safety, optimal performance, and maximum motor life, the motor surface temperature should not exceed 180°F (82°C)

Installation and Operation Precautions

- The pump is equipped with a pressure sensing demand switch that controls the maximum operating pressure.
- In addition, never subject the pump to pressures above factory set/max pressure rating.
- As long as there is inlet water pressure, the pump will not stop forward flow of water even if the
 motor is turned off. Be sure the system has positive means of shutting off water supply.
- Do not operate pump in an explosive environment. Arcing from the motor brushes, switch or
 excessive heat from an improperly cycled motor may cause an explosion.
- Do not locate the pump motor near low temperature plastics or combustible material. The surface temperature of the motor may exceed 180°F (82°C).
- Do not pump gasoline or other flammable liquids. Pump head materials are designed for use with water only. Do not use with petroleum products.
- Do not assume fluid compatibility. If the fluid is improperly matched to the pumps' elastomers, a leak may occur.
- To prevent electrical shock, disconnect power before initiating any work. In the case of pump
 failure, the motor housing and/or pump fluid may carry high voltage to components normally
 considered safe. Therefore, always consider electrical shock hazard when working with and
 handling electrical equipment. If uncertain, consult an electrician. Electrical wiring should only
 be done by a qualified electrician per local and state electrical codes.

Servicing —

- Every Year: Check system against operating standards. Flush with clean water and store in warm dry place.
- Every 2-3 Years: We recommend replacing the valves and checking against operating standards.

Recommendations —

Electrical:

- The ProFlo™ series pumps are designed for intermittent duty. Make sure that "OFF" periods are sufficient. Consult the factory for particular data and design criteria.
- Be sure power supply used is adequate for the application.
- Pump and motor specifictions are based on an alternator charged battery (13.6 VDC)
- Use sufficient battery supply power. UTV and lawn tractor batteries may affect pump performance due to low voltage and amp ratings
- Rapid On/Off Cycling must be limited to no more than 6 times per minute, even
 if the pump is operating in the Continuous Duty zone. Cycling could cause the
 motor to heat beyond the recommended maximum temperature, and reduce the
 operational life of the pump and pressure-sensing switch.

Important return safety instructions -

When returning your pump for warranty or repair, you must always do the following:

- Contact factory for RMA number.
- Flush chemical residue from the pump (best done in the field).
- Tag pump with type of chemicals having been sprayed.
- Include complete description of operation problem, such as how pump was used, symptoms of
 malfunction, etc. Since pumps can contain residues of toxic chemicals these steps are
 necessary to protect all the people who handle return shipments, and to help pinpoint the
 reason for the breakdown.
