

Van Zyverden's
HEUCHERA FIREFLY

Heuchera, which is also commonly known as Coral Bells, are native to the north American Continent and like Caladiums are more often grown for its leaves than its flowers. They can be planted in containers, borders, beds, and woodlands. This evergreen perennial comes in traditional green-leaved varieties and in the bold newer variegations in between.

*Leaves change color
throughout the seasons*

Native to North America

Perfect hedge for a pathway

About This Variety: Firefly, also known as Leuchtkafer, is a perennial that produces ivy-like leaves and red flowers on top of slender stems.

Growing Instructions: Coral bells like a neutral to slightly acidic soil pH, somewhere between 6.0 and 7.0. Good drainage is a must, especially in shaded areas. Sitting in the damp soil will cause the crown to rot.

Care Tip: Cut back the entire flower stalk after blooming to put the plant's energy into growing more leaves.

Blooms: June

Exposure: Full sun to partial shade

Height: Grows 12-24" tall

Spacing: Plant 12-18" apart, 1.5-2" deep

USDA Zones: Hardy in USDA zones 4-9

Guaranteed to grow 1 year from purchase if directions are followed. Any concerns related to quality and/or counts feel free to contact us.
