how TALL will THEY GROW?

DETERMINATE TOMATOES

(including bush-type) can grow up to 5 feet and then stop, with all fruit ripening within a 1-to-2 month period. Most will need a short cage or stake.

INDETERMINATE TOMATOES

will grow at least 5 feet (usually taller) and produce tomatoes throughout the growing season. These will need extra tall supports.

PLANTING

- Once the last chance of frost has passed, plant in a warm, bright spot (tomatoes need at least 6-8 hours of sun)
- Containers are a great way to grow herbs. Choose an 11-inch or larger pot when planting up to 3 herbs. Fill pots with Miracle-Gro® Potting Mix.
- Gently loosen the soil around the roots. Plant so 2/3 of stem is buried. Water thoroughly.
- Leave 2 to 3 feet between plants to give them room to grow

CARING

- Add mulch (chipped mulch, straw, or shredded leaves) around plants
- Stake, trellis, or cage plants for support
- Water at least an inch per week, more in hot weather
- A month after planting, begin feeding plants with Miracle-Gro® Plant Foods to boost production. Check the label to see how much and how often to apply.

HARVESTING

- Tomatoes will start out green and turn their mature color as they ripen
- Ready-to-pick fruit will feel firm and have a deep color
- Hold stem close to the fruit with one hand, and twist and pull fruit with the other or snip with garden shears
- Store harvested tomatoes at room temperature, not in the fridge
