

Windmill Palm Tree

Trachycarpus fortune

The Windmill Palm bucks the old idea that palm trees are for warm, tropical regions only because these palms are hardy all the way to 10 degrees Fahrenheit! These low-maintenance palm trees form beautiful bunches of green “windmill” style fronds that fan out from the spiny trunks of the tree. Not only that but Windmill Palm Trees are deer resistant and drought tolerant. They do well in soil with good drainage. Windmill Palm Trees grow up to 20 feet tall, bringing the feeling of the tropics to any landscape! Perfect for containers and landscapes!

USDA Zones 7-11 (for outdoor planting)

Light Needs- Partial Sun-Full Sun (4-6 hours daily)

Uses- Specimen Plant, Accent Plant, Landscape Plant, Porch and Patio Containers, Container Planting

Water Needs- Once established, needs occasional watering

Mature Size- 10-20 feet H and 6-10 feet W

Soil: Prefers sandy soils on the dry side, but adaptable to a wide range soils with good drainage.
