

PANSY CARE

Botanical Name	Viola x wittrockiana
Sun Exposure	Full to partial sun
Bloom Time	Fall, Winter, and Spring
USDA Zones	2-9

PLANTING

WHEN TO PLANT PANSIES

- Pansies can be planted in the early spring or the fall.
- Set pansy plants in the ground when it becomes workable in the spring.

WHERE TO PLANT PANSIES

- Pansies like full or partial sun, but need cooler temperatures to thrive. Space the plants about 7 to 12 inches apart. They will spread about 9 to 12 inches and grow to be about 6 to 9 inches tall.

CARE

HOW TO CARE FOR PANSIES

- Remember to water pansies regularly. One of the most common reasons pansies fail is because they are not watered enough, so if your pansies are not doing well, try watering them more.
- You can use a general, all-purpose fertilizer around your pansies to help them grow. Be wary of using a nitrogen-heavy fertilizer, though, as this can result in more foliage instead of flowers.
- Remove faded/dead flowers to encourage the plants to produce more blooms and to prolong the blooming season.
