

EASY CARE TIPS FOR YOUR THUNDERBOLT™ BOX HONEYSUCKLE

WATER

Give your plants a good soaking about once per week, and more often when it's hot. Keep in mind that plants in containers dry out faster than in the ground. If leaves are wilting or curling, more water is needed. Use a soaker hose or drip system to make watering easier.

PRUNE

Very easy to trim and shape! Trim anytime the temperature is above freezing.

FERTILIZE

We recommend using an organic fertilizer in spring and summer. Follow the instructions on the product label.

MULCH

Reduce watering and weeding by adding a 2-3 inch layer of organic bark mulch around your plants. You can find this at your local garden center.
