

FLOCKLEADER™
ARRIVE. THRIVE. RECOVER.

**ELECTROLYTES + PROBIOTICS
+ OREGANO**

When chickens are stressed, they need the extra help! Moderate stress reduces the immune function of a chicken, possibly leading to severe sickness or even death. The combination of probiotics, oregano, and electrolytes offers the extra support a flock needs to get hydrated and back to health.

RECOVER PLUS™

Moderate stress can have a huge impact on your flock!

Coping with sickness and injury among the flock is always stressful. Causes of moderate stress in chickens could be things like extreme weather changes, predator attacks, exposure to germs and changes in the environment. These types of stressors can quickly take over a flock and become detrimental. FlockLeader™ Recover Plus™ provides electrolytes, probiotics and oregano to help the flock get turned around and on the road to recovery!

Symptoms of moderate stress among chickens include panting and labored breathing, lifting wings, loss of appetite, diarrhea/pasty butt, and dirty eggs.

The science-based difference!

FlockLeader Recover contains gut-sourced bacteria that can survive and thrive in the gut. Ground-sourced bacteria, which may be used in alternative products, are not able to live within the gut.

Health is not “one size fits all.” Each product within the FlockLeader brand contains specific strains of bacteria to perform certain functions according to stage of life or stress and sickness factors.

Microencapsulation of the bacteria extends the shelf life and viability. This unique technology is used across the entire FlockLeader brand, ensuring product guarantees are being met.

A look inside our formulation

FlockLeader Recover Plus supports the health of a flock by reducing bad bacteria, preventing dehydration, and the risk of further stress.

- Specifically selected strains of probiotics that help improve a stressed gut.
- Electrolytes to help with hydration and allow for a quick recovery.
- Oregano which has strong antimicrobial properties and can improve growth.

Easy to use

Recover Plus is mixed in the drinking water for a recommended seven consecutive days during times of sickness, injury, stress, or hot weather.

An easy solution for a stressful situation!

FlockLeader Recover Plus is mixed at the rate of one teaspoon per gallon of water for seven consecutive days following the onset of moderate stress symptoms. If symptoms continue, continue using the product. Recover Plus can be used safely on all poultry species.

Science based. Research driven.®

RECOVER PLUS™

Frequently Asked Questions

How is Recover Plus given to the flock?

Recover Plus is a water supplement mixed into the flock's drinking water. We recommend mixing one teaspoon of Recover Plus per one gallon of drinking water. For a three-gallon drinker, three teaspoons would be used.

How often should Recover Plus be given to the birds?

We recommend providing Recover Plus at the first signs of moderate stress, sickness, or during hot weather for seven consecutive days.

Can Recover Plus be used every day?

We recommend using Recover Plus only for seven consecutive days, starting when the flock is showing signs of moderate stress and until the symptoms subside. For daily digestive health maintenance, without signs of stress, we recommend using FlockLeader™ Arrive™ and FlockLeader Thrive™.

Can Recover Plus only be used with poultry of a certain age?

Nope! Recover Plus can be safely used with stressed poultry of any age and stage of life, including young chicks.

Would Recover Plus be beneficial when introducing new members to the flock?

Introducing new members to a flock can disrupt the pecking order and cause moderate stress. Quarantining the new birds and providing Recover Plus until they get settled into the new environment is recommended. After wellness is determined and they are introduced to the others, providing Recover Plus to the whole flock is recommended as well.

Why is oregano used in this product?

At Perdue, we have been using oregano in our chicken diets for many years. Oregano is used as an antibiotic alternative. Recover Plus contains oregano and probiotics that can support a flock's health during times of moderate stress.

Can Recover Plus help with dirty eggs?

Dirty eggs occur when a bird is experiencing diarrhea and can be a sign the flock's health needs additional support. Birds experience diarrhea for many different reasons, one of those being heat stress. Providing Recover Plus can help keep the flock hydrated and rebalance their digestive systems, to help reduce the incidence of dirty eggs.

How many servings are in one box of Recover Plus?

In one 8-oz box there are 45 servings when mixed according to the directions of using one teaspoon per one gallon of water.

What is the proper way to store Recover Plus between uses?

Recover Plus should be kept in a cool, dark place away from moisture or water sources. If there is a chance of moisture, we recommend storing in an air-tight container to keep moisture and water out.

What is the shelf life of this product?

When stored properly, in a cool, dark place away from moisture, Recover Plus has a two-year shelf life.

What are CFUs and why are they important?

CFU stands for colony-forming unit. This is a unit of measurement to determine the number of live, good bacteria (probiotics) in the product. Recover Plus contains 2 billion CFUs per serving, which ensures there is enough good bacteria being fed to the flock.

Does Recover Plus have a withdrawal period?

No. Recover Plus is a probiotic supplement, therefore does not have a withdrawal period.

Is Recover Plus safe for all poultry species?

Yes! The entire FlockLeader brand of products, including Recover Plus, was made to benefit all poultry and waterfowl species.
