

WHY SPROUT PELLETS?

Cool, slow
release energy

Fresh fodder
harvested daily

Complete nutrition

We've collaborated with veterinarians and Ag Scientists to formulate a perfect horse pellet blend providing complete nutrition for horses of any age.

Space saving

Pellets take up $\frac{1}{5}$ of the space of hay. One Super Sack is the equivalent of 40 2-string bales of hay.

No waste

Ingredients are ground together eliminating hay stalks that picky eaters might avoid. Plus, there is no hay confetti to make a mess!

Quality you can trust

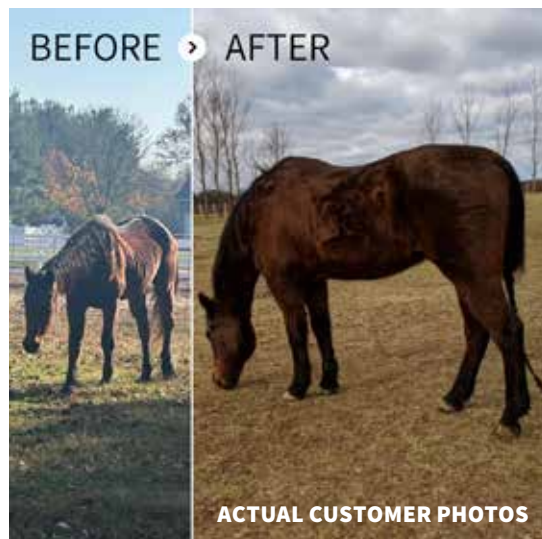

Free of additives & preservatives

Medalist Feed offers top-quality, natural feed free from binders and preservatives. Our feed provides clean, safe nutrition for horses, cows, goats, pigs, and more—keeping your animals healthy and happy.

High-quality ingredients

Our products feature the finest dairy-quality alfalfa, rigorously tested to meet the highest RVF (Relative Feed Value) standards. Only the best for your trusted steed.

SEE THE DIFFERENCE

"My horse is 41 this year, and I thought I was going to lose him because he couldn't chew hay anymore. He was dropping large amounts of weight despite multiple feedings a day. The sprout pellets absolutely saved his life, and I'll be forever grateful! He's put all his weight back, and now he's back to being fat and sassy again!" -Lindsey

MEDALIST

PREMIUM FEED

Fresh, nutrient-rich feed

Get the benefits of sprouted barley with 50% more energy than alfalfa hay in a convenient pellet. Better digestion, hydration, and overall health—all in one feed.

PELLETS AREN'T CUBES!

Medalist pellets are smaller and contain no binders which make them easier to chew compared to traditional hay cubes.

Actual Size

REGULAR

MINI

Regular VS mini pellets

Regular pellets are 1/2 inch in size, while mini pellets are 3/16 inch. Mini pellets are ideal for smaller animals such as goats, sheep, rabbits, and chickens, making them easier to eat while still providing the same high-quality nutrition.

BENEFITS

SLOW-RELEASE ENERGY

Medalist sprout pellets provide 50% more energy than alfalfa hay alone, with low NSC and vet-recommended optimal protein.

That's because barley sprouts deliver a slow-release, cool energy source, helping to improve mood, focus, and rideability without the spikes and crashes of high-sugar feeds.

IMPROVED HYDRATION

You can lead a horse to water... but what if they won't drink? If your horse needs more hydration, soaking our pellets is an easy way to increase water intake while providing essential nutrients.

HEALTHY COAT AND HOOVES

Barley grass is packed with protein, copper, zinc, and Vitamin A, all of which contribute to a shiny coat and strong, healthy hooves.

IMPROVED DIGESTION

The natural enzymes and fiber in sprouted barley support gut health by feeding friendly bacteria that produce short-chain fatty acids (SCFAs)—essential for a strong, well-functioning digestive system.

REDUCES INFLAMMATION

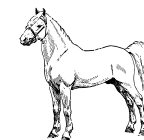

Barley grass isn't just rich in phytonutrients—it also contains powerful anti-inflammatory vitamins and minerals, like Vitamin A, that help naturally reduce inflammation and promote overall wellness.

AIDS IN RECOVERY

Barley grass is an excellent source of essential amino acids, the building blocks of protein. This helps boost recovery by supporting muscle repair, protein synthesis, and reducing oxidative stress.

HOW MUCH DO I FEED?

General feeding guideline per day:

HORSE

Feed 1-2% of body weight

COW

Feed 2-6% of body weight

BUNNY

~1/4 cup per 5 lbs of body weight

PIG

Feed 2.5-5% of body weight

SHEEP

Feed 3-4% of body weight

GOAT

Feed 2-3% of body weight

LLAMA

1/4-1/2 lbs as a supplement

MEAT CHICKEN

1/4-1/2 lb

LAYING HEN

1/4-1/3 lb
