

**FLOCKLEADER™**  
ARRIVE. THRIVE. RECOVER.

**ELECTROLYTES + PROBIOTICS**

A stressed chicken needs more than just feed! Stress can reduce the function of the immune system, causing damage to tissue and possibly leading to moderate or severe stress. FlockLeader Recover will boost immunity and promote health for a quick recovery.

# RECOVER™

**Mild stress can be damaging – early detection is key!**

Mild stress for chickens is often caused by change. Starting a new feed, an upset to their social hierarchy, a shift in their environment, and even small injuries can be stressful. Leaving these stressors untreated can lead to worsening effects and permanent damage. FlockLeader Recover provides both probiotics and electrolytes during periods of stress to support health and the risk of further stress.

Symptoms of mild stress among chickens include panting, lifting wings, loss of appetite, and loose feces. When any of these symptoms appears among the flock, it is time for Recover.

**The science-based difference!**

FlockLeader Recover contains gut-sourced bacteria that can survive and thrive in the gut. Ground-sourced bacteria, which may be used in alternative products, are not able to live within the gut.

Health is not “one size fits all.” Each product within the FlockLeader brand contains specific strains of bacteria to perform certain functions according to stage of life or stress and sickness factors.

Microencapsulation of the bacteria extends the shelf life and viability. This unique technology is used across the entire FlockLeader brand, ensuring product guarantees are being met.

**A look inside our formulation**

FlockLeader Recover supports the health, hydrations, and recovery of mildly stressed birds to prevent further stress and more permanent damage.

- Specifically selected strains of probiotics that help maintain and improved a stressed gut.
- Prebiotics that feed the good bacteria.
- Electrolytes to help stressed birds stay hydrated and allow for quick recovery.

**Easy to use**

Recover comes in a box with seven individual packets to treat for seven consecutive days during times of stress or hot weather.

**An easy application to the road of recovery!**

FlockLeader Recover is mixed at the rate of one 0.18-oz packet per gallon of water for stressed chickens, regardless of age. It is recommended to use as a treatment for seven consecutive days. Recover can be used safely on all poultry species.

## Frequently Asked Questions

### How is Recover given to the flock?

Recover is a water supplement mixed into the flock's drinking water. We recommend mixing one packet of Recover per one gallon of drinking water.

### How often should Recover be given to the birds?

We recommend providing Recover at the first signs of mild stress, sickness, or during hot weather for seven consecutive days.

### Can Recover only be used with poultry of a certain age?

Nope! Recover can be safely used with poultry of any age and stage of life, including young chicks. It is great for a flock diverse in age and species.

### Are panting and rapid breathing signs of mild stress within a flock?

Yes! Both symptoms are signs of mild stress and represent a perfect time to use Recover. Providing Recover in the flock's drinking water will help relieve the symptoms. We also recommend keeping the flock's feeder and waterer where they can be accessed safely and out of extreme sun or cold.

### Would Recover be beneficial with a flock that is not eating like normal?

There may be various reasons a flock is not eating like normal. One of those reasons could indicate the birds are experiencing mild stress, in which case we would recommend using Recover.

### How many servings are in one box of Recover?

There are seven single-serve packets in one box of Recover.

### What is the proper way to store Recover between uses?

Recover should be kept in a cool, dark place away from moisture or water sources. If there is a chance of moisture, we recommend keeping Recover in an air-tight container to keep moisture and water out.

### What is the shelf life of this product?

When stored properly, in a cool, dark place away from moisture, Recover has a two-year shelf life.

### What are CFUs and why are they important?

CFU stands for colony-forming unit. This is a unit of measurement to determine the number of live, good bacteria (probiotics) in the product. Recover contains 2 billion CFUs per serving, which ensures there is enough good bacteria being fed to the flock.

### Can Recover be used with a broody hen and newly hatched chicks?

Yes! If a broody hen is in the same pen as her newly hatched chicks, it is safe for both the hen and chicks to consume Recover. Brooding and egg laying can be stressful for a hen just as hatching can be stressful for a baby chick. Recover is safe for all life stages, so both the hen and her chicks will benefit.

### Does Recover have a withdrawal period?

No. Recover is a probiotic supplement, therefore does not have a withdrawal period.

### Is Recover safe for all poultry species?

Yes! The entire FlockLeader brand of products, including Recover, was made to benefit all poultry and waterfowl species.
