

## Instructions for Use

Please read these instructions before installing the Clean Coop™ Poultry Feedsaver. (PATENT PENDING)

**1. Empty your feeder.** The feed must be BELOW the Clean Coop™ Poultry Feedsaver elevation. This is best achieved by emptying the feeder.

**2. Adjust the height/depth of the pan.** Connect the hooks on the pan to the top most hole or slot.

**Note** - Milled/Ground Feed - If you have milled or ground feed you may need to set this to the middle position. Try starting with the highest setting.

**3. Install the ring.** Slide it over the top with the hooks/curves facing downward.

**4. Fill the feeder.** There is no need to shake the feeder. A properly installed Clean Coop™ Poultry Feedsaver should look like the photo below right. As long as the feed starts below the rings, you're good to go.

Your birds will spend MUCH less time at the feeder. They will no longer be able to play with their food. You will go through feed slower as there will be no waste. Rest assured that your birds are eating as long as there is feed in the pan.
