

Potential times to utilize Funky Unicorn Electrolyte Cubes:

- Picky water drinkers
- Clinics and strenuous exercise rides
- Horse shows and competitions
- After trailering
- At night-check with temperature changes

Funky Unicorn Electrolyte Cubes are easy to give to your horse, anytime, anywhere!

“Many clients and friends have asked me for tips and tricks to get their horses to drink when their water consumption decreases. Funky Unicorn treats have been a new recommendation I have offered for this scenario. Whether your horse is not drinking due to cold weather, recovering from an ailment, or just being picky, I have found administering these cubes help to stimulate thirst even within a few minutes. This product is not a pharmaceutical. Each cube contains a precise amount of electrolytes and is all natural. Horses are happy to receive a tasty treat, and owners can be happy knowing they are giving their companions a healthy and effective product.”

Courtney Varney DVM

How to introduce Funky Unicorn Electrolyte Cubes to your horse:

Funky Unicorn Electrolyte Cubes taste sweet and savory, so sometimes horses are a bit surprised on their first taste because they usually expect a sugary treat when first introduced. Give your horse a few taste test tries to explore the taste, within a few tastes, 90+% of horse love them! A hot day is always the best day to introduce **Funky Unicorn Electrolyte Cubes** since horses crave more salt naturally on these days.

How often and how many Funky Unicorn Electrolyte Cubes can I give my horse?

We recommend no more than 10-12 cubes per event/day for an average 1250 pound horse. It is very important that your horse has access to adequate water supply when giving our product since the electrolytes increases your horse's need to be hydrated.

Funky Unicorn Electrolyte Cubes do not replace your current electrolyte program

Funky Unicorn Electrolyte Cubes are manufactured to contain the exact amount of electrolytes in every single cube. **Funky Unicorn Electrolyte Cubes** are not meant to replace a current electrolyte program and are perfect to be given when your horse needs them most to hydrate and are convenient to have on hand.
