NUTRITION FACTS:

Depending on the time of year, whitetail deer will seek out different food sources based on their needs. During the Spring, Summer and early Fall whitetails will focus primarily on High Protein food sources like Clovers, Alfalfa, Beans and Greens (Comeback Kid, Hot Chic, Mother Load, Bombshell, No BS, etc.) As the temperature drops and the rut approaches, whitetails dietary needs will change as well. While they will still require protein intake, energy sources become more important. As a result deer will seek out plant varieties like Radish, Turnip, Rutabaga, Corn and Beans (Big Sexy, Green Machine, Show Stopper, Smack Down, Hall Pass, etc.). When designing your food plot program, keep in mind these feeding behaviors to ensure your property has the appropriate plant varieties to keep deer on your property year round. We look forward to watching you turn your property into a Domain!
