# WHOLEGAIN

**Fat balancer for cool energy,  
weight gain and shiny coat**

- Supports weight gain
- Shiny coat
- Cool energy from fat
- Sport essential multi-vitamins

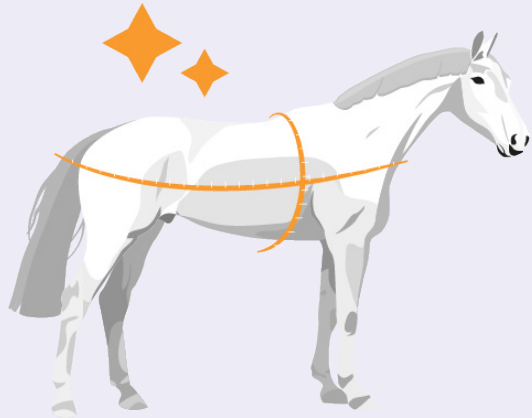

10 KG / 22 LBS

BALANCER

# About Wholegain

Cavalor WholeGain is a concentrated, high-fat muesli designed to support healthy weight gain and condition. Ideal for hard keepers and sport horses with elevated nutritional demands, it serves as a powerful top dress, adding essential fats, vitamins, and minerals to any base feed for enhanced performance and balanced nutrition.

## What makes Wholegain unique?

Supports weight gain

High in fat to support healthy weight gain and maintain ideal body condition.

Shiny coat

Premium blend of fats that delivers an optimal essential fatty acid profile for a shiny coat. Probiotics and digestive enzymes further support health from the inside out.

Cool energy from fat

Balanced mixture that combines puffed grains and high-fat ingredients for steady, slow-released energy.

Sport essential multi-vitamins

Concentrated levels of high quality vitamins and minerals. Added B vitamins to support energy metabolism. High levels of Vit E and trace minerals for strong antioxidant support.

# Advice

## Feed as you need

The foundation of good nutrition for your horse is adequate forage and access to fresh drinking water. Supplement this base with concentrates or a balancer depending on the individual nutritional needs of the horse. Use supplements to fine tune your feeding program.

## Feeding recommendations for Cavalor WholeGain

High-fat feed should be gradually built up. Introduce Cavalor WholeGain over a period of min. 5 days and feed max. 2lbs Cavalor WholeGain per horse per day. Divide the product in several feedings per day. Preferably after providing forage.

### Support weight gain

For weight gain, we recommend feeding a maximum of 0.15 lbs per 100lbs body weight, per day on top of the normal ration. For a horse weighing 1000lbs, this means a maximum of 1.5lbs per day.

### Shiny coat

For a shiny coat, we recommend replacing part of the normal concentrate by feeding a maximum of .05 lbs per 100lbs body weight per day. For a horse weighing 1000 lbs, this means a maximum of 0.5lbs per day.

### Cool energy from fat

We recommend replacing part of the normal concentrate for cool energy by feeding a minimum of 0.08lbs and a maximum of 0.15lbs per 100lbs body weight per day. For a horse weighing 1000lbs, this means a minimum of 0.75 lbs and a maximum of 1.5lbs per day.
