

Instructions:

- Remove white cap from storage knob and tighten on water outlet directly below.
- Remove handle cap and fill container
- Replace handle cap and tighten enough to create a vacuum.
- Loosen and retighten the handle after carrying the jug full of water to maintain a vacuum.

DO NOT overtighten.

- Remove small white cap from water outlet and return it to the storage knob above.
- Water will fill base and shut off when it reaches top of the water outlet.

Important: The threads of the jar must be kept clean of dirt, debris, etc., to create the proper vacuum
