

CHICK'N[™] ELECTROLYTE

NATURAL SUPPLEMENT FOR POULTRY

Helps to reduce oxidative stress
and maintain healthy immune function.

Provides electrolytes to help maintain hydration.

PRODUCT LINE

CHICK'N[™] SWELL

INGREDIENTS

Maltodextrin, Sodium chloride, Sodium acetate, Citric acid, Potassium chloride, Niacinamide, Magnesium chloride, Calcium acetate, Ascorbic Acid Vitamin E, Calcium D-Pantothenate, Vitamin A, Vitamin D₃, Riboflavin, Pyridoxine HCL, tricalcium phosphate, Folic Acid, Biotin and Vitamin B₁₂.

Guaranteed analysis per ounce (28g):

Calcium (Min): 0.1%	Vitamin A: 46 068 I.U.	Riboflavin: 45 mg
Calcium (Max): 0.4%	Vitamin D ₃ : 38 980 I.U.	Pyridoxine HCL: 28 mg
Magnesium (Min): 0.09%	Vitamin E: 85 I.U.	Folic Acid: 5 mg
Sodium (Min): 12%	Niacinamide: 282 mg	Biotin: 0.85 mg
Sodium (Max): 17%	Ascorbic Acid: 210 mg	Vitamin B ₁₂ : 142 mcg
Potassium (Min): 0.85%	Calcium D-Pantothenate: 118 mg	

THE BENEFITS

- Stresses caused by weaning, high temperature, vaccination and feed changes can cause an imbalance in the intestinal microflora. These conditions can impair fluid balance, proper functioning of intestinal and immune functions and create excess ROS (reactive oxygen species).
- The addition of electrolytes to the drinking water during periods of heat, such as K⁺, Na⁺ and Cl⁻ ions promote water consumption and water retention. They are directly involved in maintaining the acid-base balance and regulating osmotic pressure. *Sayed, M. A. M., & Downing, J. (2011)*
- Vitamins A, D and B-complex are known to help maintain proper regulation of physiological functions, including those involved in the immune system and intestinal tract. They play a significant role in maintaining and stabilizing the barrier function of epithelial cells and in the development of innate and acquired immune functions. *Shojadoost, Bahram, et al. (2021)*
- Vitamins C and E are known for their antioxidant and anti-inflammatory properties. They promote the elimination of free radicals and help protect cells from oxidation during periods of stress. In addition, these vitamins can attenuate the inflammatory response caused by oxidative stress. *Lauridsen, C., et al (2021) et Shojadoost, Bahram, et al (2021)*

RECOGNIZED PROPERTIES:

- Antioxidant
- Promotes electrolyte balance
- Immunostimulant
- Anti-inflammatory

RECOMMENDED FOR BROILERS, LAYING HENS AND TURKEYS:

- ✓ Promotes the maintenance of good hydration
- ✓ Helps animals get a good start
- ✓ Provides an antioxidant
- ✓ Positive effect on the immune system

DIRECTIONS FOR USE

For broilers, laying hens and turkeys: 1/8 teaspoon (1 g) per 34 fl oz (1 L) of water

Prepare a fresh solution every day.
Ensure that freshwater is always available to animals.

Recommended for periods of 1 to 7 days.

A level measurement gives approximately 1/8 teaspoon (1 g).

Caution: A withdrawal period is not required when the product is used in accordance with the label guidelines.

Packaging: 10.5 oz (300 g) **Shelf life:** 24 months
