## ORIENT LUMBER AND TRIM FOR BEST APPEARANCE

Framing lumber is graded for structural strength and not appearance. Exterior trim is graded for one good side.

Always install the material leaving the best edge and best surface visible. Please remember that these blemishes in no way negatively affect the strength or integrity of our product. (See Fig. A, B, C.)

## ADDITIONAL MATERIALS

**THIS KIT DOES NOT INCLUDE ANY FOUNDATION OR FLOOR MATERIALS.**

 See **page 5** for a **CONCRETE FOUNDATION** option.

 See **pages 6 to 13** for a **WOOD FLOOR** framing option.

 See the **FLOOR LEVELING** section on **page 7** for recommended methods and suggested materials to properly level your framed floor, as this will vary depending on your specific site.

## CONCRETE FOUNDATION

If you choose to install your kit on a concrete slab refer to the diagram below. Attach the sill plates on the foundation as shown, and continue on to page 13.

Building Size	Actual Floor Size	A	B	C	D
12'x 24' (365,8 x 609,6 cm)	12'x 24' (365,8 x 609,6 cm)	144" (365,8 cm)	281" (713,7 cm)	288" (731,5 cm)	322" (817,9 cm)

12' x 24' Building Requires:

**x6** 2 x 4 x 12' (5,1 x 10,2 x 365,8 cm)

**x3** Caulk 

**72'** (21,9 m) Foam Sill Tape 

**!** Allow new concrete slabs to cure for at least seven (7) days.

- A treated 2 x 4 (5,1 x 10,2 cm) sill plate is required when installing your shed on concrete. Purchase full length treated lumber, or butt shorter pieces end-to-end and seal seams with caulk.
- Use a high quality exterior grade caulk beneath all sill plates or use sill tape.
- Fasten 2 x 4 (5,1 x 10,2 cm) sill plates to slab using approved concrete anchors (fasteners not included).

**!** NOTE: When sill tape is used, there will be a visible 1/2" gap beneath the sill plate as well as under the door sill. The 1/2" gap between the sill plate and the concrete will be visible after the siding is installed.

**ALWAYS CHECK WITH LOCAL BUILDING CODES FOR CONCRETE SLABS BEFORE BEGINNING CONCRETE FLOOR.**

## WOOD FLOOR MATERIAL LIST (NOT INCLUDED)

## REINFORCED WOOD FLOOR FRAME

**NOTE:** Depending upon the weight of items you will be storing on your wood floor, you may choose to use **2"x 10"x 12'** or **2"x 12"x 12'** treated lumber for increased floor strength.

### REINFORCED FLOOR FRAME MATERIALS LIST

## WOOD FRAME FLOOR LEVELING OPTIONS

There are multiple ways to level your floor frame. Our recommended leveling method is shown below.  
Leveling materials are not included in this kit.

### PREFERRED METHOD - 4x4 TREATED RUNNERS (Typical for 12' x 24' Kit)

Runners are generally 12" (30,5 cm) from ends of floor frame and under seams.

- 3" Screws angled into 4x4.
- (2) at each point frame and 4x4 touch.

**! FLOOR FRAME NOT INCLUDED**

#### MATERIAL REQUIRED

12' x 24'  x6 4 x 4 x 12' (10,2 x 10,2 x 305 cm)  
Treated Lumber

#### Fasteners for Frame to 4x4.

(3" Screws shown as one option.)

Minimum 3" screws / exterior grade.

x150  3" (7,6 cm)

**! Use only wood treated for ground contact and fasteners approved for use with treated wood.**

**! Always support frame seams.**

#### LEVELING METHODS

- Level under 4x4 runners only.
- Locate leveling material 12" from ends of runners and no more than 48" apart.
- Asphalt shingles should be used between 4x4 runners and blocks or treated lumber. Never use shingles in direct contact with ground.
- For best results and aiding in water drainage use gravel under each concrete block.

#### LEVELING MATERIALS

- Gravel
- Solid Masonry Blocks in 1", 2", 4" or 8" thickness
- 2x4 Treated Lumber
- Asphalt Shingles

**! Leveling higher than 16" not recommended.**

**STOP!**

## LEVEL AND SQUARE FLOOR FRAME

**STOP!**

Before attaching floor decking, it is important to level and square the floor frame. A level and square floor frame is required to correctly construct your shed. (Floor frame and decking not included.)

**BEGIN**

- 1 See page 7 for the preferred floor leveling method.
- 2 Use a level and check that the frame is level before applying floor panels.
- 3 Check for frame squareness by measuring diagonally across corners. If the measurements are the same, the frame is square. The diagonal measurement will be approximately **322" (817,9 cm)**.
- 4 When the frame is level and square, secure one side of frame to the 4x4 runners using one fastener at ends of each runner (**Fig. A**).

At the opposite end of the frame, secure the frame to 4x4 runners using one fastener at ends of each runner making sure the frame remains square (**Fig. A**).

First, secure at ends using one fastener.

**Fig. A**

- 3" Screws angled into 4x4.
- (2) screws at each point of the frame and where the 4x4's touch.

**Fig. B**

Runners are generally 12" (30,5 cm) from ends of floor frame and under seams.

Second, secure at ends using one fastener.

Measurements to centers of 4x4's.

Once the floor frame is level and square, fasten the frame at each point the frame contacts the 4x4 runners (**Fig. B**).

# FLOOR FRAME

## PARTS REQUIRED:

x156  3" (7,6 cm)

x29 **TREATED**   
2 x 8 x 144" (5,1 x 20,3 x 365,8 cm)

### ✓ BEGIN

- 1 Cut 25 floor joists down to 141".
- 2 Install floor joists 12 on center, as shown.  
Nail using (3) 3" nails at each location (**Fig. A**). Use (6) 3" nails at seams (**Fig. B**).

- 3 Check the floor frame is square by measuring diagonally across the frame corners. If the measurements are the same your floor frame is square. The measurement will be approximately 322" (**Fig. C**).

You have finished assembling your floor frame.

# FLOOR PANELS

## PARTS REQUIRED:
