NAIL BOXES

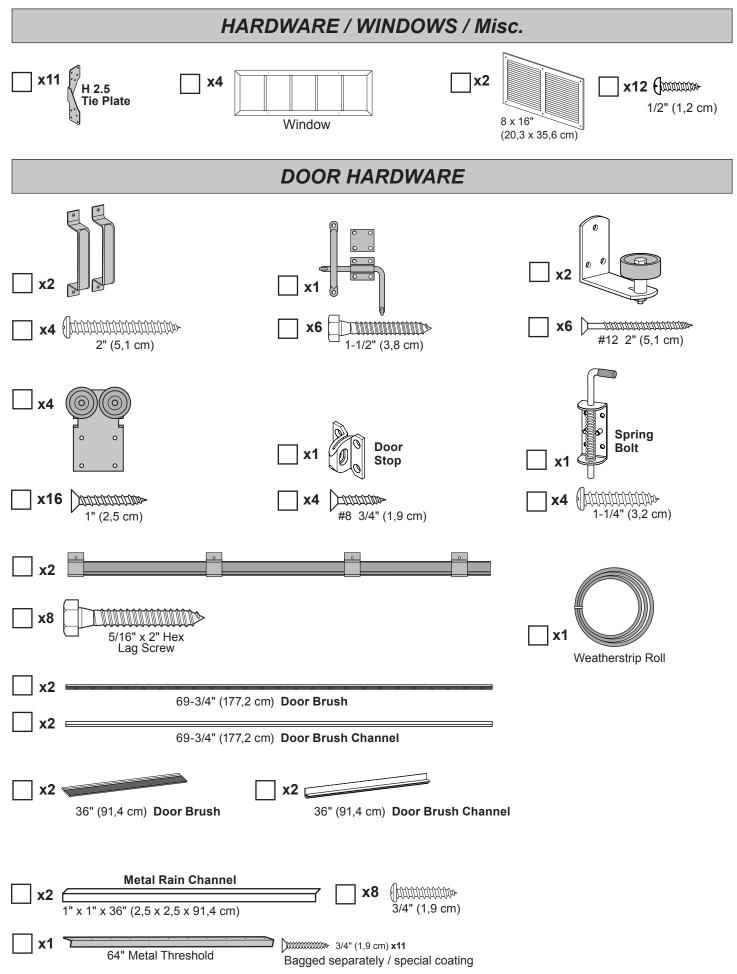

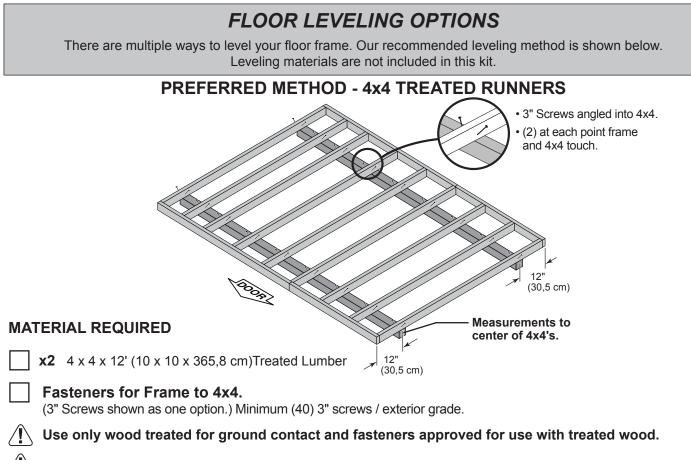

FASTENER / HARDWARE BAG

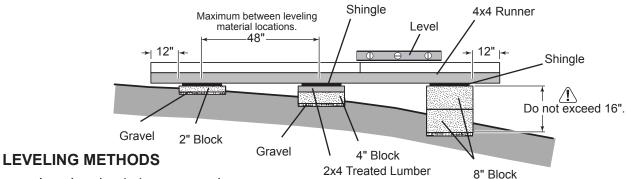

NOTE:

If you are using a nail gun, nails may be used where screws are shown for quicker assembly. Length of nail must match screw length.

Always support frame seams.

- Level under 4x4 runners only.
 - Locate leveling material 12" from ends of runners and no more than 48" apart.
- Asphalt shingles should be used between 4x4 runners and blocks or treated lumber. Never use shingles in direct contact with ground.
- For best results and aiding in water drainage use gravel under each concrete block.

LEVELING MATERIALS

- Gravel Solid Masonry Blocks in 1", 2", 4" or 8" thickness

Asphalt Shingles

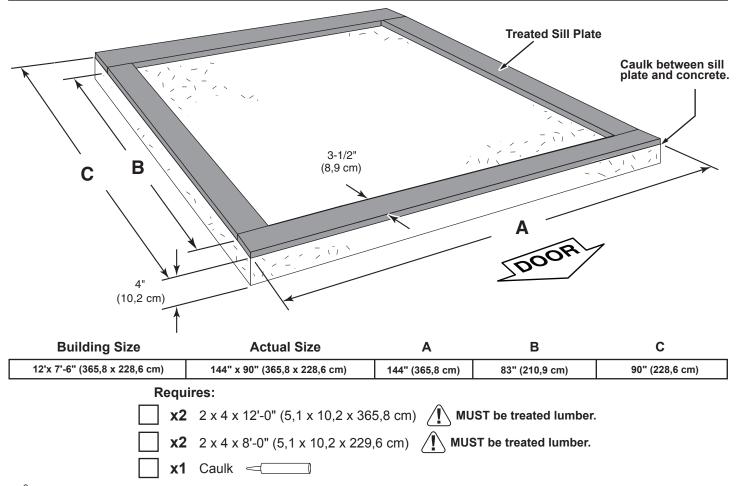

2x4 Treated Lumber

1 Leveling higher than 16" not recommended. CONCRETE

• If you are building your shed on a concrete foundation see the following page.

CONCRETE FOUNDATION

Your kit contains all materials to construct a wooden floor. If you choose to install your kit on a concrete slab refer to the diagram below.

Allow new concrete slabs to cure for at least seven (7) days.

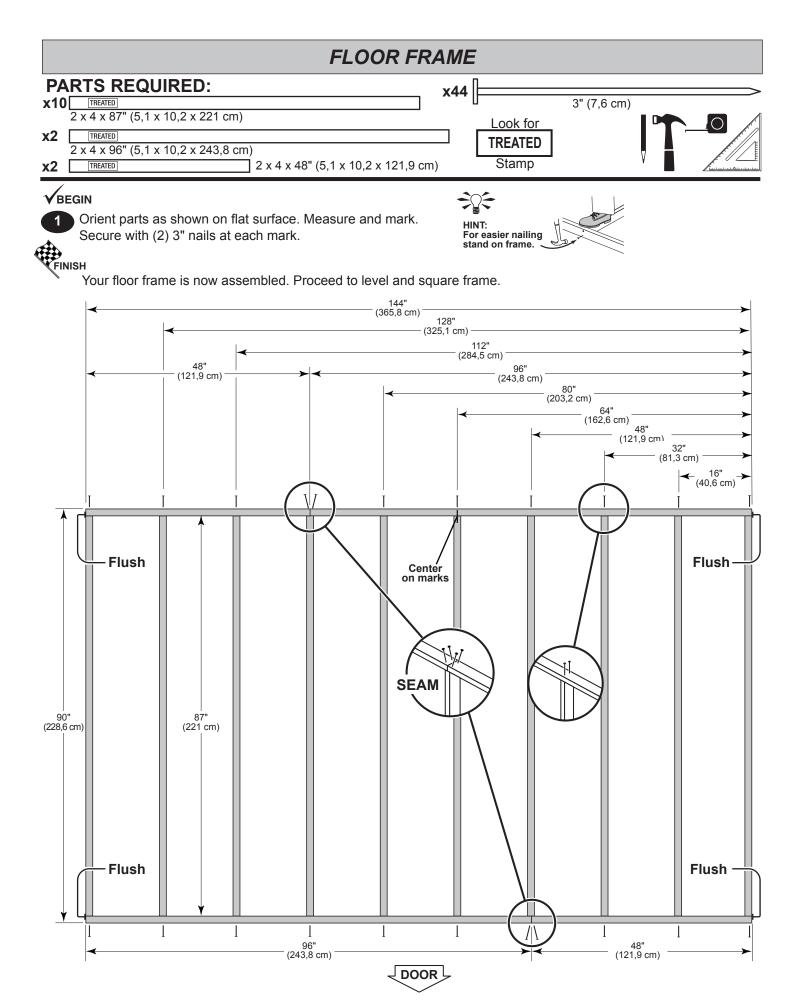

• A treated 2 x 4 (5,1 x 10,2 cm) sill plate is required when installing your shed on concrete. Hint: Use treated lumber in your kit or purchase full length treated lumber.

• Use a high quality exterior grade caulk beneath all sill plates.

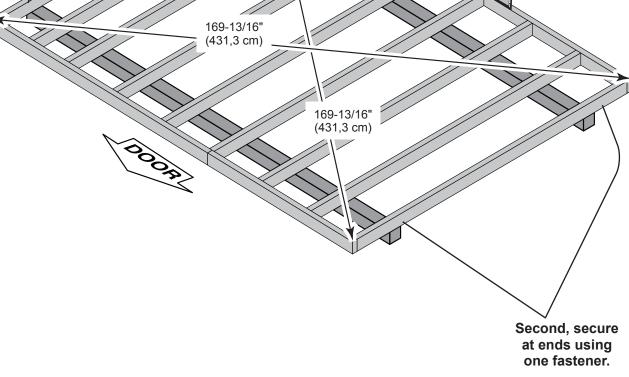

• Fasten 2 x 4 (5,1 x 10,2 cm) sill plates to slab using approved concrete anchors (fasteners not included).

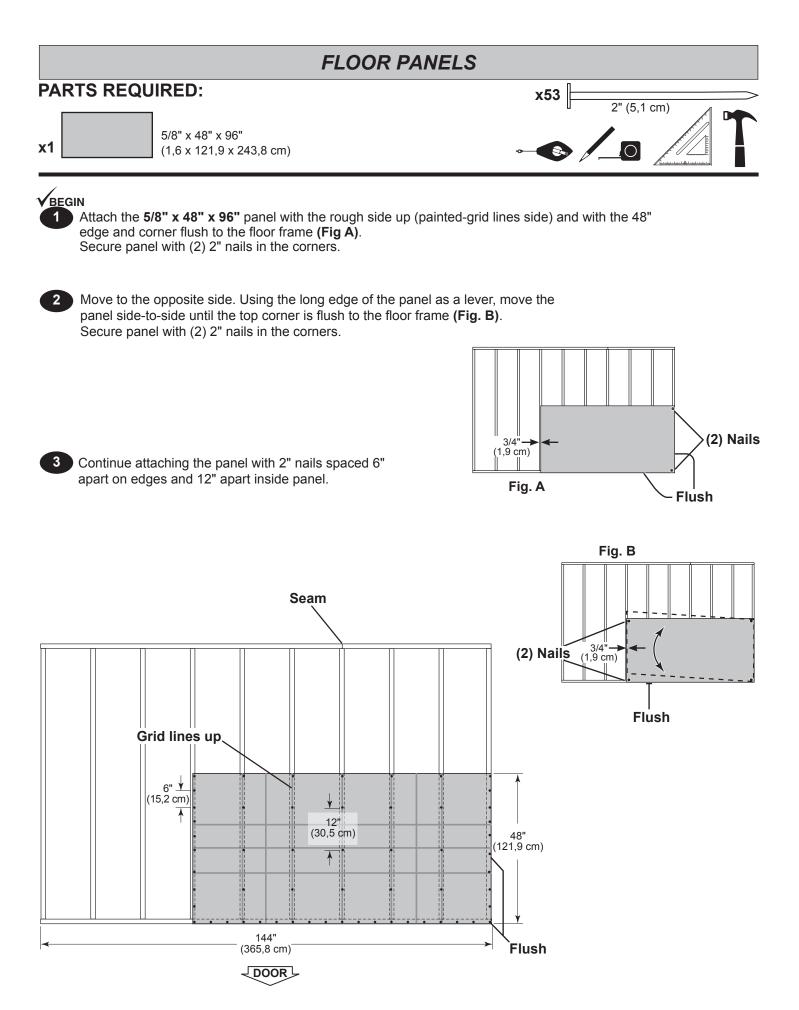

Check local code for concrete foundation requirements.

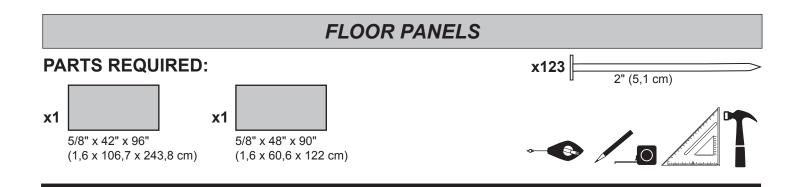

NOTES

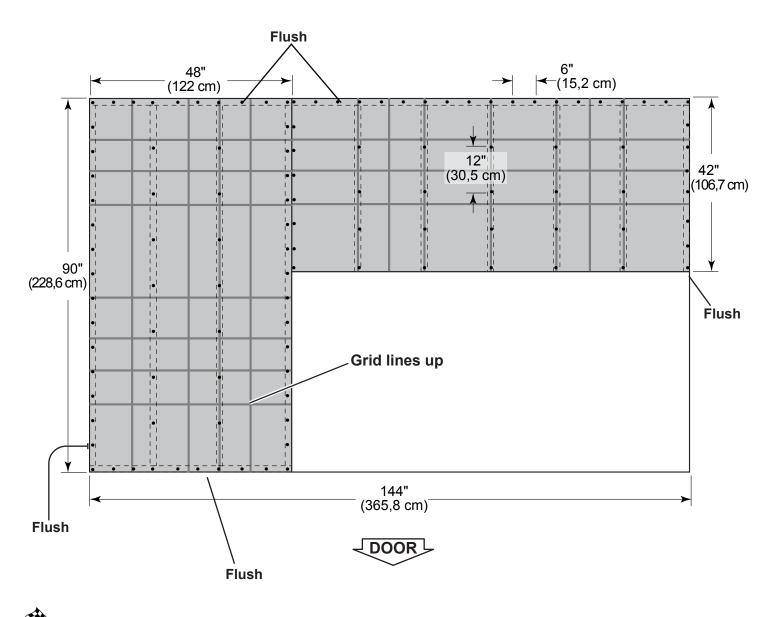

LEVEL AND SQUARE FLOOR FRAME STOP! STOP! Before attaching floor decking, it is important to level and square the floor frame. A level and square floor frame is required to correctly construct your shed. 1 See page 8 for the preferred floor leveling method. Use level and check the frame is level before applying floor panels. Check for frame squareness by measuring diagonally across corners. If the measurements are the same, the frame is square. The diagonal measurement will be approximately 169-13/16" (431,3 cm). 4 When the frame is level and square secure one side of frame to the 4x4 runners using one fastener at ends of each runner. Move to the opposite end of the frame. Secure the frame to 4x4 runners using one fastener at ends of each runner making sure the frame remains square (Fig. A). NISH Once the floor frame is level and square fasten the frame to the 4x4 runners at each point the frame contacts the 4x4 runners. First, secure Fig. A at ends using one fastener. 169-13/16" (431,3 cm)

Continue installing panels with 2" nails spaced 6" apart on edges, and 12" apart inside panels.

 Your floor panels are now installed.

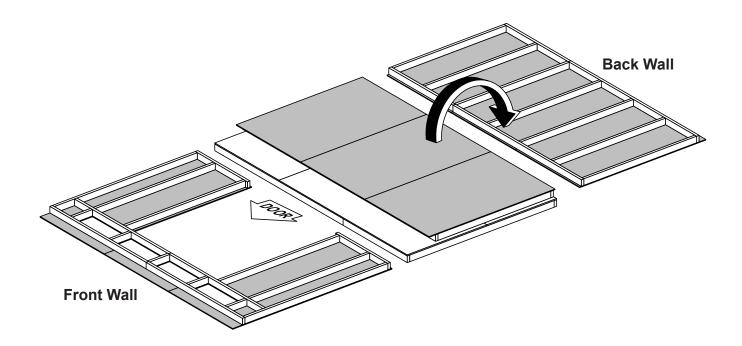

IMPORTANT!

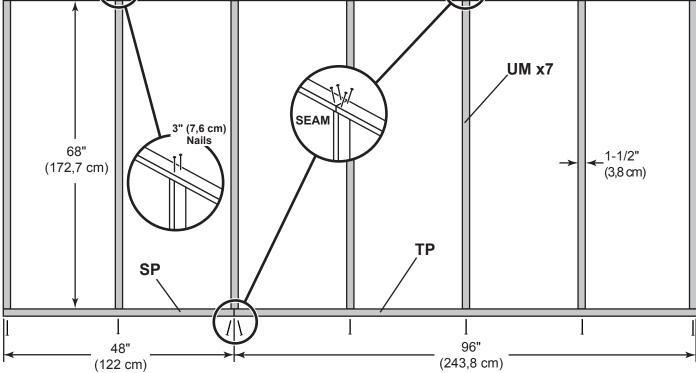

Check the floor frame is level after installing floor panels. Re-level if needed.

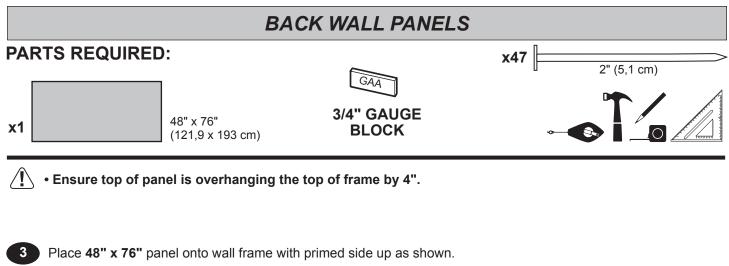

- The floor should be used as a stable work surface for wall construction.
- - Organize your assembly procedure during the build process to avoid over-handling of the walls.
